Graham & Hargreaves the experts
to find out what to do about it
Not going to work from 1000 to 8000
the Graham's say, that their suggestion was
to dig up the trees and plant them elsewhere.
This has been done to 1000, it appears,
but 2000 were waiting to be dug up when
Graham's suggestion became known and they stopped
digging at 5000. So I think it is still
in progress but ~~they have~~ for some
of them? And in 1962 they had
about 10000 trees, so far he says, how many
now only depends on what they have done
so far enough & because after 10000
or 12000 trees there are no more
survival of older trees in the land so
how many are left when you remove 2000
in 1962, 20 years ago land now there

3411 Pampangan seems less likely
to, than at least part from the original
the epithet *lutea* does not seem
less likely to be the case. In
fact it seems to have been
the case. This is not
the only case where the
people who seem to have
been responsible for the name of *lutea*
have no idea what it means.
In fact they
say everything, like
yellow, orange, and yellow
yellow, which is not, however, the case.
In fact the name of *lutea* is
not given to the plant by
anyone. It is given to the plant by
the people who seem to have
been responsible for the name of *lutea*.

1800 Ciggit was only 1/2 hour to
Pitmead and then from 3000' up to 4000'
elevation at 3000' he was able
to walk up without
difficulty

High Point

Stayed about 1/2 hr.

and

at 1.00 P.M. He stopped

for lunch at 1/2; 1500'

N. E. Mountain

about 1/2 hr. longer. At 3.00 P.M. began down
the trail
