# THIS GIANT THAT IS NEW YORK 

By Frederick Simpich

With Natural-Color Illustrations by Clifton Adams and Edtuin L. Wisherd, Staff Photographers

NEW YORK! Man's inconiparable feat! As incredible, almost, as that ants should have built the Andes! Colossal monument to that genius which creites new things faster than simplewords can be Found to define them!
Venice laughed at Marco Polo when he tame back and toid of Chima. It couldn't: believe in a land with paper moncy and black stones that burned.

Could Marco revive now and see New York, he could hiardly describe a single thing. He would lack name-words. So would Hemry Hulson, Peter Stuyvesant, Lord Howe-even Fulton or General Grant.
With what words in use even at the end of outr Civill War could you define tadio, rivet guns: autornats, esenlators, electric power and light, pneumatic mail tubes, clevators that shoot up 700 feet ia minute, subways, compressed-air drills, dictophones, teletype and adding machines, vacuum cleaners, gas ice-makers, or even a motor truek?
Their names we moderns know and that they work, though few can say how. Yet with them and other new machines man builds and ruts his cities.

With them he achieved New York, the very actre of human effort. Power and tight are its symbols and skyscrapers its phenomena. By day they make its magic and they turn its nights into cosmice melodrama.

Co up on any high hotel roof after sumset and watch the city come to life. By efectric moons, rainbows, and fixed comets you see Manhattan blaze from dusk into gurgeous theatrical illumination. Flood lights paint its pimmacles, as when sum first flastied on earth's wirgin peaks and the music of the spheres began.
Out of crepusenlar space its twinkling skyline ebbs and flows in tides of tempo and color. As each edifice melts into new lights and shadows, all the architectural phantasmagoria of the ages, linked even with carth's ancient scars, seems to unfold. In fancy you see a phantom city, a kaleidoscopic riot of Alps and Acropolis: Ming Tombs, Taj Mahn1, athd Pyramids; Gibraltar, Panama Canal, Tower of Babel. with Grand Canyon and Yangtze Gorged formed by street caverns far below: Cologne Cathedral, Pikes Peak, and St. Peter's; a Chinese Wall against a Sahara Desert of lamp-lit sky; towers and turrets, mosques, minarets, domes, steeples. roof tanks, and penthouses all heaped and crowding and scetning to burn as smoke moves in electric light.

Next day, from the same high place. see it again-realistic, noisy, its streets crowded with traffic.

As Rome rests upon her hills, so New York covers its many islands. But it never rests. Higher and ever higher rise the Ekyscrapers. Their mastodontic bulk; their

Phataitiaph liy Hutre Gathowsy
50 THIS IS NEW YORK!
From the iteps of the Customiouse one Jook porth over Bowline Cruen und into the mouth of Broudway's roantig catyoin, where New Yofk legins. In 1920 this Cutomhouse collected wome $\$ 350,000,000$ in duties. The water frait of Greater New York, induding Munhaltan, the Broms, Brooldyn, Quethe, Richmond, and the New Jersey eide, tatnls Fit miles
grace of geometric design; their dizzy height and fearsonve beanty-at first they almost hint that man's monsters have run away with him. Stare up at such a building and it fairly dominites one's mind and body.

I talked with a mun who had just built an "cloutd tickler." We met in his office, 57 floors above 42 d Strect.
"Why did you make it so high?"
He spoke of space, crowds, land costs, zone laws, and rente.
"Yet Egypt couldn"t have bect so crowded," I urged, "when Cheops piled up his Great Pyrantid; nor Babylonia when its people rased their tower. . . ... But there was Nebuchadnezaar.
"Of course; pride, too," he admitted, lifting a window shade and gasing out.
CROWDG MAKE CITIES AND CITIES MAKI CHOWDS
We were so high that bits of fog went floating by. Miles to the east stretched Long Laland; to the south was the Statue of Liberty, and Staten Ishand. And we could see far west, into New Jersey, and to the north, beyond Central Park.

Below hy mere pigniy structures of six and eight stories. Here and there, up from among thetn, other skyscrapers rose about us, in this swiftly changing regiont of Mid-Manhattan. Firm, symmetrical they were, with all the pragan dignity of a Lincoln Memorial. In their myriad windows we could see giils pounding typewriters or powdering their noses; but, save for a faint metallic city hum from far below, there was no sound. Here one could think.

These figh buildings; that visitors from all over the world stare at with surch as: tonishment, moke New York what it isthe stuprene wonder of the modern wortd (see Photogravure Plate VII).

When the first "skybcraper," of only 13 stories, went up on Lower Brondway, people feared it. Those in adjacent houses moved out in alarm. Nor was the public quite reassured, even after the builder hud gone up into its steel frame during a gale and let down a plumb line to prove there was no dangerous sway.

Now, higher and ever higher they go$50,60,70,85$ stories. So many there are, and so ligh, that to-day the vertical fravel in Nere York actually cxercds the

至 Brownine brulive
THE WOMID'S TALTFFST
The Chyyster Building, uitig 37 highospeod elewators rikes 77 stories at Iexington Aywue and 4ad Streat ; but the Empire Stite Puilding, How beine crected on the site of the former Waldorf-Asturia Hotel, and to be finthed in May, 1931, will attain 85 stories

Royaliy, statomen, conquering wartiors, tramsatlantic flyerh-New York has welconted them all. The Modom, visible just above the fireboat's shootinge

horioonal. In other words, elevators carry more passengers than do all the surface cars, elevated trains, taxis, buses, and subways combined.
"How far do your 21 elevators run in a day ?" I asked the owner of a skyscraper.
"They cover a mileage equal to the run of the Twentieth Century Limited from New York to Chicago," he answered "One of our big prablems in New Yorlk is getting the occupants of skyscrapers in stud out on time. You sec, the larger butiflings hold anywhere from 5,000 to 15,000 and even 20,000 workers. In some are found people from practically every State in the Union. If all these tenants had to realh downstairs, it might tuke hours to empty a building; and many, of contse, are physically incapable of walking down. Try it yourself. It took one of my staif more than half an hour to walk down from lis office on the 57 th floor, and the eftort made him very ill.
"Even with express elevators, it takes us nearly an hour to enrpty some of the larger buildings and get the peopic away from the grollen floor and entrances, beculuse of congested subways. If they all came down at once, it would pile people up ten or twelve deep in the strects around the building. The higher these buildings rise, the heavier they are. So; as we buifd higher, we must use more and more of the ground space for supporting columns, which means more crowding on the lower floors."
"How high will they go?" I ventured.
"Who knows? Based on one city block or leas, perhaps we've reached the limit: but we may eventually have sleyscrapers hased on two. three, or four blocks, with archways over strents. They might reach 150 stories. Who knows?"

## A MODERS SKYSCRAPER IS A CITY WITHIS ITSEALI 1

I explored one modern buiding, the last word in skysectaper art It is a city in itself, with all II city's problems of traffic, water, heat, lights, sewnge, fire and police protection, and cicaning. Its total floor area equals that of many a farm. To run its elevators requires at starter, six aggistant starters, 35 operators, and a crew of to maintenance men.

Since water from fire hydrants can be sqquirted upward only about 150 feet, and
since firemen cannot drag a hose up so or 75 stories, the building has its own opright water mains; tanks, and high-pres: sute pumps, with an efalorate system of alarnus and extirguishing apparatus.

Besides its many other workers, it employs 400 charwomen, 50 porters, and many window-washers.

It stands on Lexington Avente, in the turhulent Grand Central district. Here, Into the Chanin, Chrysler, Graylar, Grand Central Palace, and other buildings, more than 50,000 people crowd to work in ant trea used till recent years by only a few hundreds. Into this indescribable traffic jam it would now be almost impossible to get towded coal wagonis fast enough to heat these huge structures or to himul away ashes; so for heating many buildings hereabouts steam is piped from a far-away central plint.

Bencath this building are turntables for buses from railway terninals. Tunnels lend from it in many directions. Throught them thousands of its tenants arrive each morning after muny miles of miderground travel, and through them one may wander, as in the streets of a subtermnean city: In this humath prairie-dog town are more than 50 phaces to eat, and stores selling everything from office supplies and lingerie to thertios bottles, sumray latips, cipars, books, and laberdnshery. From these commercial catacombs ane may ride all the way out to Lome Island without ever coming into the open air.

## WITH ASAZING SPFED OLD BUILDINGS ARE WEECKBL AND NEW ONES RISE

But New York's greatness is not in structure alone. It lies also in the speed at which life moves and new buildings dis. place the old. This swift transition stuns even the blase New Yorker.
"That's a finc building there," observed a visitor, rilling up Fifth Avenue with his host.
"Take a good look at it" joked the hatter. "It may not be there when we come back"
Troy was wredked and rebuile nine times. Here history repeats. Compare the skyline now with pletures of the same region made only ten years ago. You will see that palutial homes have been demolighed and whole residence districts swept away to clear sites for higher buildings.

Phelayuph lof tivhu Gutlo=ey

## MAN LIFTS HIS BUISINESS TEMPLES EVER HIGHER

Nebuchadnerrar walked the roof of his new palace in Babylon, and looked haughtily down on more humble homes. Pride, as well as economic necde, rilses the skyscrapers. The new Chanin Building, at 42 d Strect and Lexington Avenue.

## WHEN NEW YORK DELIGHTS TO HONOR A HERO

When celebrities of world wide distinetion come visiting. New Yorie lands them offictally at the Battery, and from that point, many a historic parade has entered Brondway, to be showered with snowstorms of paper, leaves torn from telephone books, and milles of "tickertape"

Phutegrath hy E-vina ©illowny

## MADISON SQUARE, FROM ATOP THE NEW YORK LIFE BUILDING

A great theater long famous for its horse ahows, circuses, boxine mateles, six-day bicycie naces and other sports, formerly flomished here. Monuments to Arthur, Seward, Conkling, Worth and Farragut, stand in this Manlattan breathine space.

Photoumph by Fainchid Aerial Buryrge Ine LONG STEAMER LANES LINK NEW YORK WITH EVERY CLIME the Old Worid; and from here, each season, armiea of tourists embarle for Europe and many for South America. The Leviathan being docked,
 THE COLOSSAL ARCHITECTURAL MASS THAT LOOMS ON LOWER MANHATTAN
Towering dizaily above dark, narrow canyon streets, their sheer bulk nuggentive of Andean crags and peake, these giant atructures bring gasps of KVII

Photngroph lve Ewine Gathry
LIKE RAYS OF BENEDICTION BATHING SOME CATHEDRAL THRONG
Morning sunbeams stream throngh an cast window of the Grand Central Terminal Concourse. On the balcony, in the background, appear two coaches of the De Witt Clinton Train of 1831.

Here obsolescence is a devil to be cast out, and to-day's builder is to-morrow's vandal. You see the famous WaldorfAstoria turn to junk. Fountnins of sparks hiss from tis iron skeletom, as clinging workmen wield their fiery cutting torches. And hard on the heels of its wreck comes the amlaying Empire State Buthling.
"It costs more to wreck "ent than the junk is worth," said a contractor. "Falling glass is dangerous. . . . Our first move is to send in a flock of hummer wops with orders to smash everything that will hreak:

Old doors, tubs, stairways, patuels, they ain't worth saving; you can't fit 'cm into new-style buildings.
Yes, of course, these quick changes make many old-timers feel sad. . . . . One fatmous hotel was wrecked where a certain old lady had lived for years. She died soon after they closed it. . . . Her fayorite waiters went to her fumeral ; the hotel orchestra went, too, and played some of the pieces she used to ask for:"

To widen streets, you see houses sliced off in front as with giant shears. Four hundred buildings wrecked to extend a subway spur: trainloads of dirt hauled to the river front and dumped to make at park below Riverside Drive. In cyclonic devastation, whole neighborhoods razed for new bridge approaches.

Swiftly the old landmarke fade. Only Grant's Tomb and similar objects of sentiment seem safe. If even the Splinx stood on Fifth Avente, somebody would probably want to wreck it to build a sleyscraper: Here is no space for static things. All montuments now are to charging business, revolution in architecture, and new whys of doing things. Even the days of the new buildings themselves are numbered, though their function endures. Through myrind whispering wires the city hears and talks: but the great New York Telephone Building could as well stand over in the Jersey meadows. Some day it may.

You can get an easy idea of how fast New York grows if you can imagine that five or ten years ago a man got up on top of the Times Building with a movie camcra. Suppose that he trained it back tunt forth over growing Mid-Manhattin, and cranked and cranked till yesterday; then. his film developed, he should show you a motion picture of the city's growth in recont years. By many cuts and rumnitg it
fast, inagine this picture shown in, stay, two or three hours. You would see ald buildings crumbling down and new skyserapers hastening heavenward, pushong up like giant mushrooms. It would be unendurable.

Compared with medieval cities, think how fast New York grows. Time was when men lived their whole lives in the shadows of cathedrals then building, yet saw walls rise only a few yards. To-day. in New York, bricklayers may run walls up two stories in a day. A building of go floors is begun and finished in about the same time it used to take a Sioux to kill a buffito and tan its hide for his wigwam. Chrysler's Tower in Abraham's timic would have been a blasphenay, as when the confusion of tongues fell on men who dared build Babel. Now it's only another skyscraper, although the world's tallesturitil the Emplite State Building is completed (see page 519).

## MHN CHOWD MANHATTAN LTRT SHAH1RIS OH A HOCK

Betwen crowds and skyserapers is reciprocal affinity. Each is the cause of the other. Into that part of Manhattan below 50th Strect there comes to work every morning an army of people equal to the population of Paris of Chicago. No other spot on earth is so crowded with men and houses.

It reminds you of one certnin rock neat ti coast where cotmorants, gulls, and pelicans all come to roost. Other isflets are neitr, but the fussing birids crowd and defile only their favorite rock. They pack it so tight that if one bird rrises a wing to stretch, another is puthed into the sea.

Thus men crowd Manhattat rock. Not only that. They bore holes in it, dige tumnels under rivers, and push bridges over to it, so that still more men may reach it hastily. The passengers on its transport lines each year outnumber all the people in the world, Those passing through Times Square Subway Station alone last year equaled in number half the inhahitants of the Western Hemisphere.

So jammed is Fifth Avenue now that in busy hours at man walking goes faster than a bus. In many streets motors average less than four miles an hour.
"Why do you drive a horsc?" I asked a lower Broudway teamster.

Fhategenh by Falmail Atral Survergy Inc
TH1 WOOLWOETH TOWER T1CKI,F THE CLOLIS
Fog or low cloud fields often ampther atl Manhattan, like the stolke pall of a burning city, Betrath this blankot, Homewhere, Broaduruys life is throbtung
"He's cheaper to start and stop than a truck and easier to get out of tight places."

Civilization is shaped by beliefs. New York betieves it must hurry, and you see the strain in people's faces. They run to work and from work, and to nvoid being rim over. In crowds, haste is more than speed. Draw aside in the Grant Central Station and watch the mad nurring rush At such a time and place, one expects little order ; certainly no stately procession. ${ }^{73}$ Noah's animals marching into the Ark. But here is a mob. Turnstiles are sometimes locked to check its rushes, and guards are powerless before ita giant pusis. Yet, though men dart, dodge, run mround each other, and leap forward hoto the smatlest open spuce, actual progress is slow. Everyone hurries, fut moves more slowly than a man walking alone in a village street.

But congestion seens the penaly of being a city. Deep chariat ruts in Pompeii's paved streets show that even the Romans battled with traffic.

New York's fight to keep men and things in motion knows no litl. Now it builds a great elevated express highway, a
novel thoroughfare many fect above the strect. It will run along the Hudson River water front from Canal Strect north to 72d, with tamps for acoess and egress at a few important cross-town streets. At 72d its outlet will be into Riverside Drive.

Think what this will mean to crowded New York! A broad, free path of two go-ioot rodidways, with no grade crossmigs, able to carty from 5,000 to 9,000 motor cars an hour, at a speed of 35 tuiles-right oter all congestion (p.535).

Then there's the new tunnel, to rum tinder tidewater from Brooklyn out to Staten Island. It will take from two to four years to bore this bold submarine highwny.

## ALI ROADS LTAD TO SEW YMH

Rivers and hays are crowded, as well ins the city strects. That hearse, unbroken blast is from the hartor. Laok down from the Woolworth Tower and see our fleets battling for trade against alien ships: So thick ape steamers that collisions seem imminent. From every nook and cranny of the world they come,

Photmenplif from Grindan R Crictait
PLCGLE: FHND UNDERGROHND SUNCE TOR ANY MORE THMNGS
Wires, tubes turnels, thos, conduits, sewers, subwhys, water and gas main battie for subterrancan right of way. Where to put more, at the city grows, is an ever-harder ptoblem.
nis coutrymen flock to a village store. Goods moving in scores of millions of tons. No other port anywhere is so busy.
One ocean ship and four long freight trains every 20 minutes of daylight. More than 40 per ecnt of our oversea trade and a large share of our water-bome home commerce passes through this furmel. NHture suniled when she laid out the port. Within a 25 -mile radius of City Hall, on Manhattan, there run nearly 8ob miles of water front. The channel to open sea is deep and direct. Tides are easy; ice jams. and bad fogs are rare

As a fin's ribs run together at its handle, so the net of Atlantic steamer lanes converges here. To England, to all the maritime countries of Euroge and the Mediterranean, New York 19 the chief pott in the Western Hemisphere. From South America, from everywhete, set traide flows to it.

This port grew so hig and spread so far that New Jersey and New York State made a compact to plan and develop it jointly. This foint agency is called the "Port of New York Authority."

Huge and complex its problems are. It has to do rot only with boats, but with new docks, terminuls, bridges, turnels, ratesin fact, every phase of truffic over or tmder the Hudson, East, and Harlem Rivers, Long Island Sound, Newark, Raritanand Jamnica Bays -in area embracing 1,463 square miles in the Port District.

In and about the great city dwell to,000,000 people. To get food to them, and coal, is part of the Port's colossal task: cach year the freight stream swells. More slips, car floats, ferties, train yards; more and more tumnels and bridges must be built

Traffic across the Huffon doubles every cight years. It is estimated that even the new Holland Tunnel, capable of moving 50,000 whicles a day, will have reached its capncity by 1934 . Already, to reliceve it, another vehicular tumnel has been proposed under the Hudson near 38th Street.

HITRE HSES THE WORLD'S GREATEST SUSPENBTON BRTDGE

ground to keep the great city in light and motion, to water it and make it articulate.

## POWIR TSTED HIRE WOULD SWINE HHE CITY TNTO STACE

Without electricity, modern New York could not be. And, more than to any other one man, it owes its greatness to Thomas A. Edison. From creation till recent years, all power was but the effort of men, beasts, wind, and water. Even steam, as we count time, is new.

Hoists, wound by blindfolded horses, were lifting goods when Edison, in 1882 . gave New York its first electric current. "In some places," he says, "a horse would be taken upstairs and kept there until he died."

Now the stupendous total electric strength of New York is ntmost inconputable. Ore nimble-witted engineer has figured that its clevators alone would carry 10,500,000 people 78,500 miles a day!

This power, huttling a thousand subway trains through colossal bowling alleys,
fairly pumpa millions of people a day in and out of the city. Land, farther and farther out, turns from mere soil to real estate when wires of power and light lead to it. New York never grew fast till electric power came to pull its trains without smoke. It affects the ebb and flow of human tides, industrial boons and breaks, and the shifts of trades.

On Broadway giddy electric signs flash and run. Millons who know the White Way remember the fiery kitten playing with a ball: the galloping horses of the chariot race; a certain wind-blown petticoat, when they still existed, and even the colorful champagne nivertisements of long, long ago. Sinuilar signs to-day bring enormous rents. Here, on Broadway, dathness never falls. Here, figuratively. the sitn stands still, as Joshm bade it do when he assailed the Amorites. More "etermal" than nyythical temple lamps, the lights of New York never go out. Like chocks, calendars, and equinoxes, they keep sfep with time.

Thotoctipli hy WIde Warlf
WHHN RLEHHANTS RAN WILD 1N HARLEM STREETS
Rentems froth waiting their turn in an animal act these baby elephant boltod from hack stage of a vandeville thoter. Stage hands atd trainets finally hotud them thto a bear-by police ithition.

Trims, truchs, tumnels, and pumps: stgp-and-go signs, fire and police nlarms; elevators, illumination, ath conmunication: telephones, telegraphs; bells, batteries, and buzzers; beacons, boilers, broilers, ovets, ranges, and toasters-nearly 65,000 uses, enginieers suy, New York finds for light and power.

What if the current failed? Panic, paralysis: millions marooned in skyscrapers or caught in subways-and ali dark! Fantustic thought; power stations are many and independent. Only some costwic upheaval could bring this cataclysm. But merely to ponder it is to show the utter deperidence on power and light.

## WHAT THE MILTONS DO WHO DNIEY CHOWD MAKHATTAN ROCK

Life here seems gay and blithe-to the castal.

Soft lights, low music, sumpturis cafes, laxurious lobbies, fashion parades on Fifth Avenut: \$ $\$ 30,000$ fur coats, blooded horses galloping in Central Park, imported limousines, glistening jewel shops, costly
foods, lavish theaters, rare cut flowers, priceless art treasures, pearls, paintiugs. and palaces-a city rich and scintillating.

That side the visitor knows. What he seldom sees are 15 -cent Bowery "flops" fand the ragged, humgry bread-line: and thin-clad, shivesing men and women waiting in early morning cold to grab the first papers of the street, to search the "help wanted" columms, and dart off, first in line for the chance at a job.

Manhattan works. The signs of opttent ease are on the surfice. Among the millions who work for salaries, for wages, or on commission, competition is intense. The battie for jobs neyer ends-a job at atiythirgs, from rimning an shding minchine to playing a zither. Onty toil, steady tand tremendous, lets New York live in afl its complexity. There are more clerks and salestuen than Uncle Sam has sailors and soldiers:
Butchers, bakers, bellhops, bus boys, and harbers: timers, taxi-men, tailors, typists. printers. painters, poultry-pickers. and piano-tuners; florists, fishmongers,
and fiddlers; waiters, window-wnshers, and whari workers; singers, street-sweepers, and sandwichmen; cooks, candy-maikers, riveters, and steel workers; brokers, bankers, presidents of corporations known from Chile to Chint- they're all in the day's work.

Much of New York's work is for its trainloads of daily visitors, Every third vehicle is a crusing tixicab. In 800 theaters and other places of amusement are sents for $1,200,000$ patrons.

Vast armies work in hotels and restaurants.

And everywhere, again and again, yous see how much men now enslave clectricity. Theaters, stores, and office buildings use air-conditioning plants; big fans draw in fresh air, wash and dry it, cool it, and run it through the rooms, pushing out stale air.

## THBEE-HETHS OF AMERICAN WOMEX'S CLOTHES MADE HITRE

Here is made three-fifths of all women's clothing worn in the United States. Out of every six people engaged in manufticturing in New York City, one is making women's wear. But slow handwork is no more. Huge output is reached by power machines ; they sew, cut, and work buttonholes, put on buttons, mert sloeves, embroider, bind, and pleat, doing all that old sweatshops once did by hand.

Gant skyserapers, especially buitt and tighted, now house the nyriad garment workers. From these they swarm at noon, to glut Seventh Avenue and to stare up at the sky, it men always stare up at it when released from confinement.

Into this fur market millions of pelts pour each year. Seventy-five per cent of the Nation's wholesate fur trade if here, High wages of World War days put American men into silk shirts and changed women from cloth to fur coats. Furwearing endures. More fur workers are gathered here than anywhere clse. With electric machines the pelts are washed, dyed in vats fitted with agitators, sheared. and then finished by electric cutters and stitchers, Even in matching skins, specalal light fixtures ate used.

Inkewise the power line revolutionized printing. Now type is set by hand only on special jobs. Linotypes and mono types are ruil by current; it rums the
presses, too, printing from one to four colors at a time. In binderies you see folders, btuckers, stitchers, trimmers, cutters, and glue cookers all run by electricity. So with photo-engraving, lithography, and rotogravire work Though many printing plants leave New York, for one reason or another, the volume of printing does not diminish; at some 3,000 printing plants trearly 57,000 people are at work, Probably 70 per cent of the $110,000,000$ books marketed yearly in America are made in New York.

## I6 ElEctric man-power serivants por Every hesident

An engineer estimated the clectric current used here, in terms of man-power. It works out at the rate of 16 servants per hour for each resident of Manluitatu. Certainly the increase in the the of clectricity has given each worker an earning capacity never before dreamed of. Ninetyseven per cent of all power exerted here is electric.

Think of maill From 126th Street to downtown Broollyn are a post offices, linked by 28 miles of underground tubes, with 54 receiving and sernding terminals. Through these pnematic tubes, at 30 tuiles an hour, about 140,000 containers are shot a day, each holding up to 500 letters. No mail truck could fum through congested streets that fast.

The local telephone company gets calls at the rate of about 100 a secand. Its statf is larger than the standing Army of the United States.

Through the somiles of pnewnatic tubes used by telegraph companies in Lower Manlotion, there rush so many messages a day that no attempt is even made to count them. Most of these are typed by electric printers in sending and so transeribed at destination.
Regiments gather news. Two press groups alone send out close to $1,200,000$ words a day. They use 3,000 printertelegraph machines, which work so fast that any paper in the United States can be recciving the news in ten minutes.

thonsand customen a day pourng in through 50 entranices. So mach money taken in that ironchad trucks with armed guards haul it tway in loats- 0 much that any one day's receipts would buy outright a big store and all its stock in a fairsized provincial city, Gools received and soll faster than ever before - tramloads.

These vast trade emporiums reveal the city's whims, One customer buys an incredibly big order of canned goods. "Pleasc prack 'em well in fifty-pound waterproof boxes," he says. "1've got to move "em up the Andes on mule-hack."

Another asks for and finds whole camed clickens imported from Java.

A third waddles in and seeks the interpreter. "Oh, yes, she wints Lecthuchen irom Nuremberg. Send her to the fourth floor."

Before the interpreters' deaks you sees line of foreigners.
"What foreign language is most spolen here?" you ask.
"Spanish," saysa Florida Cukan. "And most of our Spanishispectking customers are Porto Ricans. Why? I don't know: Here's another odd thing: most of them may live it New York fout or five years. doing all their shopping in small stores. before they get up their merve to venture into one of these bigg placos and take their first ride on the escalators."
"How many questfons do I sinswer?" echoes an information-desk girl. "By actual tally, from Thankgiving till Christmas, ahout 8,0oo at day. But, then, retmember that 27,000 customers an hotte ride up to the second floor on thase esealators, and we make more than at million and a quarter ensh sales a week. Look at the cash tubes, for cxample. Ir a single day those little prockets travel a total distance of 11,363 miles."

One great store sells for cash and seeks always to undersell its rivals by a fixed percentage So price warg occur. An amusing tale is current of a battle royal over certain coolie coats. The supply was fimited; two rival stores got them all and began a price-cutting war. Originally the coats had been marked to sell it \$12.50: but, as the war waged hotter, pne of the rivals, with in daring gesture, marked his conts down to \$2.50, at which price they all sold like magic But next Monday they reapprared in the other fellow's win-
dow, selling again at $\$ 12.501$ His clerks were therival's "customers" for the \$2 50 bargains.
"Advertising, like many aspects of retail trade, has changed a lot in my time," said one veterm merchant. "I remember a little town out West and its leading merchant. His store stood on the town's busy corner, where his three sons helped him sell drygools, Every Saturday noon in winter this merchant wonld get up on the roof of his store and throw a new overcoat down into the street. The crowd scrambled for it. That was advertising then. Incidentally, one of the merchant's boys was supposed to be quick enough to grab the coat and rush it back to the shelves, to be thrown down again nest Saturday. It was a bad day for the loys if they fet an outsider get away with that decoy coat!"

To-day the advertising department of any big store is one of its most carefully organized and closely watched factors. It is the motor that rums the business. Here one sees artists, designers, copy-writers, space-buyers, experts in styles and fasisions, often in conference with buyers and department managers, planning their campaign weeks athend.

## 

A huge share of all advertising tectivity in America centers in New York.

Pick up the public library files of any magazine of newspaper published a gencration ago and look it the advertisements. Crude cuts; dull, perfunctory phrases. Then see the art, the appeal and human interest of to-diy's best advertising. Choose any piece of modern "institutiomal" or "educational" copy. Here is a masterpiece, lifted at random from the files of the New York Telephone Comipany. It is entitled "Two Engineering "Triumplis" :

"New York may not create style, "t said il deparmint store heal. "That's at rmoot question: lout we do itifluenceit, and, through display and judicious pictorinl advertisimg, we interpret it. Americhn women put style above quality.
"Every important retaller now in the United States has some form of New York buying ugency. A dozen lig hotels here in Mid-Manhattan are almost given over to buyers from the interiot, So it doesn't take the New York fashions long to travel neross our contiment."

## HOTHLS BECOME SHATS

 OF THDUSTRLAL FADESGreat hotels are no longer simply places pictures and features, standardizing the datics from Name to Californin; also. most world news, gathered by press services and distributed from liere.

Here are more singers, musicians, metors, theaters, libtarles, musemms, and lectures than anywhere else, atul from here the Nation gets its latest "somg hite" and vaudeville skits.
"What fmpressed you most ? I anked of a newly arrived Germin journulist.
"That you Americans don't think," he sad. "You're too busy." But that night thoustands, unable to got tickets, rushed a
to cat, sleep, and get mail. Many are become seats of industrinl fairs Bind trafe conventions. To cheer one group of buyers, trick horses, ncrobats, find a herd of elephants were taken hagh up into a botel ballroom

Hardly a day but in cvery great hotel you see excited men, all hranded with the same silk badge, hnstening into an atsembly room: bands, speeches, much handclapping, and flashlight photographs, amid much tohacco smoke, and the day's theme may be-well, niew styles in hats; motor bonts, shoes, knit goods, ©r automolifes:
or new ways of preserving food, saving foreste, runntigbeatity shops, teaching dancing organzing labor, treating furs, practicing dentistry, boosting aviation, defeating prohilition, enforcing prohirbition, mising the tariff, lowering freight rates, checking crime. brecting mabits.

Here every important bank in the Nation has a correspondent and most great corporations luve an office. Here, as industry knows, banks and husitiess train each yoir mary of thase youmg men who go to far places to carry on for Ancrica in her cotistant battle for forcign commerie.

And to New York every day comes the stream of youth from all over out Nation. You can identify the boys and gitls, newcomers, if you stand in Grand Central or Penmsylvania Station and watch their behavior is they step from the trains, They hesitate it moment, oblivious of the crowds, looking upward, gripping their bags and bundles, hearing New York, sensing it They seldom go back. It's hard to find a native-borm New Yorker in New York, but it's harder to find onie anywhere else: and from this provincinl stream, and from young immigrants who tearned English in the slums, have come many men famots now as leaters in the annals of the great city.

In the gallerics of the Chamber of Commerce of the State of New York, in Lib)enty Street, there is a group of portratis. Few people know it is thete. You step in, to total darkness; turn a button and, by
same ingetrious simulation of coming dawn, a finint light, at first rosy, then growing whiter, illuminates the vast roam; and there are Levi P. Morton, James I. Hill, Johin D Rockefeller, Cornelius N. Bliss, Andrew Carnegie, Joseph H. Choate, Moses Taylor, Allocit Gallatin, Alexander Hamilton. Thomas Edison, Grover Cleveland. Willim E. Dodge. Mortis K. Jesup, Irving T. Bush, A. Barton Hepburn, Darwin P. Kingsley, Seth Low, Eupene H. Outerbridge, Theolore A. Havemeyer, William B. Astor, Collis P. Huntington, Cormelius Vanderhilh, and more-a few only in the long list of strong

men whose minds have left their mark on New York and on the Nation.

To-day some of those who will inherit power work as ushers, megaphone men on Coney lsland buses, brokers' clerks, reporters, real-estate salesmen, junior engineers, and newstoys. That is America.

WAEF STRFET IS THE POCFETDOOK OF THE WORLD
Nearly all nations have borrowed money or sold their bonds through Wall Street, which means New York's financial center. The rensons are known; they grew out of the World War. The fact proves what colossal eredit is here.

In the Federal Reserve Bank alone is stared about one-twelfth of all the gold in the world. Its giant vaults rur down five storics deep, far below the Hudson River level. I was permitted to turn a wheel which closed a go-ton steel door on nearly $\$ 5.000,000,000$ in gold and securities.

Inside, 20 rooms of gold, in coin and butlion; bars of gold from the Rand, from England, and the United States; gold in
bags and gold bars in eyen rows, shelf on shelf, like books in a library; and giant scales to weigh heavy loads of gold, yet so delicately balanced that they tipped when 1 laid a bit of paper on them.
And in other banks, more than 200 of all kinds, more money, more securities, and scores of armored moncy vans with toopholes in their steel sides for guards to shoot through, moving here and there, all day long, hauling money, torts of it, tsed each day by stores, shops, and subways; yet 95 per cent of all our transactions are by check, which shows again the power of credit, which is mutual faith.

A $\$ 15,000,000$ building goes up without one dofinr of actual cash changing lands. In old days kites and tich men built only by paying in treasure; but New York luuilds wift credit, us does all America.

Go to the Stock Exchange and look down from the gallery. Men rum, push, and shout till noise cechoes from the high ceilings. It sounds like Texas cowboys arging milling cattle into a loading pen. As if a cyclone had wrecked a paper mill

FOR ITS SIZE MODRRN NEW YORK HAS JHW DHASTBOLSS PIRLS
Fire-fighting efficiency, plus improved firepioof construction, Leeps lassee down. Nearly 7,000 meri, including 29 deputy chiefs, 86 battalion clivefs and humdreds of captaiine and lietitentints, compose its fire department of 354 comphaties. A fire in Girectwich Street
torn scraps litter the floor. But confusion is more apparent than real Actually, a system ohtains and its plenomenon is credit.
"Five hundred steel at 185 " is offered.
"Take it," says a broker; or maybe he only nods his head and makes a motation on a pad.

That is credit. On it is based all moodern enterprise.

New York, center of credit, exerts is profound influence on the whole country. Though tons of gold are stored here, it is seldom used. Credit is the substitute.

We are familine with trade, the finterchange of groods from Maine to California; ; but the daily flow of money and intangible credit is of en unnoticed, except by banks. Yet on this fact rests Ameriner's growth.

With credit, either from New York or from London and the Continent through New York, we built our firat great railways.

To-day, for the newest Texas of refinery, Montana smelter, or Milwaukee
manufacturing plant, the credit comes in the end from New York, for here is the Nation's reservoir.
"WHO OWNS NEW YORE'S SKyecrapers?"
"Who owns your new building?" I bantered a Manhattanite.
"Ten thousand people ont in your Middle West," he sald. "They bought outir bonds through so-and-so."

It is so with foreign bonds sold here. A man in Jowa may own a lamp-post in Oslo or a rubber tree in Liberia as part of the property back of his overseas bond.

The Stock Exchange is the chief vehicle through which nation-wide distribution of ownership in industries, railroads; mines. oil fields, ete. is achieved.

Our great corporations, economists say, are no longer the lengtherning shadow of one man. Wealth is more and more divided, aE ownership of corporations passes from family groups to the general public: In one utility company now more than half a million Americans own shares. A steel conicern belongs to about 120,000
and the list runs on through railways and pthers. Many companies in New York, as elsewhere, urge enyployees to buy stock Thus, much of the wealth represented by buildings and corporations with beat offices here is owned by people all aver the United States.

Stocks listed on the Exchange show how complex our life hat grownt yeast, ginger ale, radio, roller bearings, banann bonts, fice boxes, atirplanes, television, talkinge washing, and knitting machines; and the whole list, worth 65 or 70 billions, represents 15 per cent of all our mational wealth.

It is the only market anywhere which by ticler gives a whole Nation the daily story of all prices on market transections and the volume.

This ready marketability-the fact that holders of stocks listed here can sell them for cash any fime, "at the marloet," is a chief function of the Exchange.

Who could write of New York and leave out Wall Street? Even chitdhood memuries recall that now obsolete caricature of the big fat man in plug hat, with dollar-marks on his vest, who stood for the Wall Strect trusts, the trusts that now belong in large part to "10,000 people out in your Middle West."
In the Wall Street section now are more great executive offices than anywhere else in Americh. This hendquarters grouping of big concerns follows naturally, since here are located the largest banks, the important insurance companies, and the exchanges, the latter including not only the New York Stock Exchange, but the Cotton Exchange, the Coffee and Sugar Exchange, the Produce Exchange, the Mercantile Exchange, the New York Real Fstate Securities Exchange, and various athers.
HHW YURF'S ATPHTUTE PUTS TMSTNAT HF GTONS UNDER CULTTUNTION
The wolf would be at New York's door were it not that man has found ways to preserve food. Refrigerator cars plus cold anid dry storage in warchouses save the city from starvation.

Even at that, in many perishable things it is only a day or a week ahead of humger. A general strike of transport workers would leave its situation critical.

Its chief food problem to-day is more and better terminal facilitics and wate-
hotites to luandle its ever-increasing food stream.

New York, like every other great city, stands at a break in transportation lines. Here end the rums of ships from everywhere. In old days it was the Erie Canal which first brought food and goods from the interior. Then came the railways. Every important system in castern United States now ends here, of its cars arrive over connecting lines. This puts all foodproducing areas in the world, and purticularly those of the United States, at the city's beck and cill.

## CITY'S CONSUMPTION FIXPS IN PAIT THE FOOD PRICES FOR THE NATIOS

There is, practically, no such thing for New York as "fruits and vegetables in stason." It can buy strawberries, ripe tomntoes, cucumbers, and green peas on New Year's Day.

Crossing Times Square at midnight, a hooded vant passed me. From it came mogning somids of cattle bawling.
"What's that?" I asked a friendly policemiti.
"Cows and calves for thekosher butcher," he said. "Over on the West Side theykill "em every night, thousands of 'em, for the Jewish people. The Jews won't eat meat that's been killed longer than 72 hours."

The truth, thought of by few, is that New York is a huge market for live cattle. sheep, goats, anif poultry because here lives the world's largest group of Jews Chickens come from the Middle West by the trannload. You can see scores of cars parked in the yards over in Jersey. "Chicken Pullmans" they are called. The boy who rides them in, to feed and water the chickens, gets all the eges laid on the way,
"I don't care how late the train gets in,." said one of these hen porters.

Food thythm is unbroken. From Battefy to Branx, probably no free hen has haid and cackled for miany a year; yet press a button any morniris and eggs appear; also cotfee, tea, milk; and white, rye, or whole-wheat bread; ham, fam, bacon, calves' liver, or what will you? Armies, rot mobs, are back of this perfect organization. Men bewail the confusion of the city; in fact, confusion is slight, whereas order and routine are amazing.

Yet what prodigions piles of everything New York eats! So much that, literally,

This impreative broup of qwolve hthlings at West $168 t h$ street and Hrondway wete erreded by

it fixes the prices the whole Nation must pay for certain kinds of foods.

New York, with other citics, eats so much that, with the belp now of lang-distance refrigerator-car hauls and cold storage, it las enabled many far-distant land areas to come under cultivation. Floridat for example, for its groves and gardens, finds northern cities its chief market.

Experts say also that not only the cost of living, but the daily food of one-tenth of all the people in the United States, depends upon the efficiency of the New York food-distributing system. It becomes a uational laboratory for the study of urban market problems.
W. P. Hedden, author of "How Great Cities Are Fed," told me that at a series of Jectures at Calumbia University on city marketing his audiences included a peach shipper from Georgia, an apple man from the State of Washington, farm agents from near-by States, professors from State agricultural schools, commission and retail merchants, a city market supervisor, a Goyemment price reporter, buyers from restaurants, and instructors in civies and home economics.

Walk through Washington Market of along anty lower Manhattnn pier in early morning. Thereyou grasp, even if vaguely, something of the prodigiout quantities of food New York eats. This astonishing bulk and variety hint also at the yearround activities in our vast hinterfand of farms, runches, orchards, gardens; cattle, sheep, and bog pens, poultry yards and potato patches, where men toil and whence come the trains, trucks, and ships with their loads of food for New York. Much of the fruit comes from California, 3,000 miles away, and some from Chile and farof South Africa as well.
"But how much food of all kinds docs New York ent-ft and its enviruns served by delivery wagons?"
Nobody lnows cxactly. Experts have estinnited it at about $10,000,000,000$ pounds in year. "How much is that?" you ask.
Well, $5,000,000$ tons. Neither does that mean anything.

More, then, than is consumed each year by all the standing armies of the world.

Whatever it is, the farm acreage required to feed the city is staggering. Cheerful statisticians, fond of figures, say that New York drinks all the milk from

50,000 dairy fanms, and that it would take two or three million acres to grow the grain for its luread. Estimates by the Port of New York Authority, from Department of Agriculture reports, indicate that last year the city consumed perishable foods in the following carloud lots:

But, again, what do such vast figures mean? You cannot see the food pile for the figures.

FACH DAY THE CITY DRTNKS THE TLOW OF AN ARTIFICIAE RIVER
Can you imagine a man nearly a mile tall, with a mouth a hundred feet wide? A man who could wade across Lake Superior, which is 1,000 feet deep, and get wet only up to liis knees? Such a monster, drinking night and day, could just about consume New York's water supply, On a hot day the city uses one billion gallons. There are less than two billion people on earth: so that is more than half a gallon for every person.

Though Romans wrote their names in giant aqueduct masonry, among engineering feats of all time are few so stupendous as New York's water system.

From far up in the Catskill Mountains a tunnel, running bencath the Hudson's rocky bed near West Point, brings this subterranean stream to the city. So huge is this tunnel that a railway train could run through it. To blast and bore this incredible bole, to siphon one veritable river under another, took eleven years and cost the lives of scores of ment.
"On account of past geological changes," an engineer told me, "and the wear of the rock by ice and river, we had to go down more that $1, I 50$ feet below the surface of the Hudson to make a siphom. We had to dig deep enough so that the upward pressure of the water would be more than balanced by the weight of the rock above the tunnel. We didn't depend on the strength of the rock, but upon its weight.

## WHHRE PARK ROW MEETS TIE DOWUBY

Sunliebt filters throuzh the "L" upon a Bowery whose fame is gune Only ofd-timery remember its halcyon days of dance thalls, singing waiters, tattoced saflors, saloons, ifooting galleries, and pinchbeck shortine life
"tt is 159 miles downhill from the Catskills to Staten Isfand. Flowing by gravity, the water in New York pipes is under such pressure that it tises high enough for most uses, but, of course, not for the skyactapers. They have their own pressure systems. Then there's our special high-ptessure fire systen for parts of Manhattan. It carries spectal pipes because it also uses salt water. The elec-tric-power people are under contract to riti pumits for these spectal fire muins.
"If you sank a pipe into the water tumnel where it learls to Brooklyn, 700 feet tuidergrotnd, yout wotld have to ralise the

Phutigeraph Let Eufur Gallewny
top end of your pipe up into the uir about twice as high as Brooklyn Bridge to keep the water from overflowing from it.
"You get it striking picture of how efficient this water strvice is when I tell yout that we bring 40 burkets of water 150 miles, carry it up many fliglits of stairs, and deliver it at your kitchen faucet at incost of only otic cent ! If a private company owned this systemi. people might have to pay three timus as much. Our rates have not risen in mearly 60 years.
"In digginge for dams and restrvoirsup in the Catscills, the entgincers found fossils of what probalily reptesents some of the oldest forms of life on this continent. Some fern stems were two and three feet thick.
"Farms, towns, even graycyards, had to be sacrificed or moved, to get storage space in the Catskill slopes. Many once thriving communities are now under the waters of the artificial lokes.
"Now, to give Erroklyn and Queens a substitute source of water, we are digeing a new tunnel from a point sibout liaif a mile north of our city limits. It will bring water from new sources of supply in the east branches of the Delaware River. The contract for it is one of the largest ever let anywhere. When this new tunnel is done the city conld fall back on it for water should the original Catskill tube ever fail: but sitnce it was opened, in 1917 . its giant flow has never stopped.
"We do not plan our witer supply for aty one dry year, but for a period of dry years.

FROM EAMY TALES TO EINSTHN'S THHOHY, THIS HHMAKY SUITS FVABY MENTAL TASTE

"Yes, odd inciuments still happen. Between Brooldyn and Staten Island water is carried through a huge iron pipe which is sunk in the mud. Orice a dredge broke this pipe. In traking repairs our engineers used an aretylene flame under witier. And there are the eeft Large ones apparently live in the mains far below the city. Lately we caught one at a ptumping station, where it was drawn up; it was nearly four fect lotes and weithed 11 pounds. Another. tot quite so bog. choked a water tap and stopped the meter:
"One of the biggest mining jolis ever done, yout might sily of this water system. The great tunnel, so far down in the earth, loud to be dymamited for miles and nites. What's down there now is a subterratient river, at man-made miderground stream with flow enough to flat a steamer of to cover this whole Manhattan Island with 30 feet of water every day."

After any considerable absence from

New lork, in thrse transient times, one sees it again unly with Rip van Winkle eyes. It is no longer eyen a horizontal city : now its growth is skyward, "Where do things belong?" is the question the ever-shifting city sechs to answer.

## MAN'S झTHUCDLE TO WORF AND LIVI CHANGFB THE MAE OF THE CHTY

It grows so fast that trades and industries move about like langs and bishops on a chess-hoard. Many kinds of business have been crowded entirely out of lower New York by congestion and high rents:

No dancing schools conld pay Wall Street rents any more than a suitors home or a bowling slley could flourish in the better parts of Fifth Avenue. Always one type of wse fights another, and that business wins which can use a certain area to most profit.

Like London, no one dremmel New York contd grow so big. Nearly 2 go years ngo

Photicmaph by Fatrig Culluma

Humgry Ghetto Fhat Sthere crowding ahout a carb lumeh atatd, where German "bluch" rye bread is pold by the tlice. Butter is two cents catria Many saled involve less than five cents
one William Petty forecast the limits to London's growth. One force that would limit it, he said, was the distance which beef cattle could be driven in a day! Petty didn't dream that London would finally get frozen beef from Argentina, any more than early New York vineyardists could foresec 400 or 500 carlonds of fresh Califortia grapes arriving daily in autumn at the Eric Pier.
On your first plunge into the tumule that is New York, it does not make sense. Dymamic din, shouts, confusion; worfoers falling over each other, red-faced police hoarsely shouting in traffic jams; a baffling welter of paradoxes without rhyme or тenson. "Nine million people eat, sleep, work, and play in the aren," says the Regional Plan Survey's report. "But the assignment of the land to the various uses seems to the superficial observer to have been made by the Mad Hatter at Alice's ten party. Some of the poorest prople Hive in conveniently loated slums on highpriced land. On patrician Fifth Avenue, Tiffany and Woolworth, cheek by jowl, offer jewels and jimeracks from substan-
tially identical sites. Childs's restaurants thrive and muttiply where Delmotico's withered and died. A stone's throw from the Stock Exchange the air is filled with the aroma of rolasting coffec; a few hundred feet from Times Square, with the stench of slaughter houses.

This Regional Plan group, financed by the Russell Sage Foundation, began some years ago a survey of the city. Its aim, among ofher things, is to see how crowds may be thimned out or moved faster and how more things nuy be "put where they belong."

## NHW YORK PAMTLES ARE CONSTANTLY ON THE MOVE

The city, viewed as a metropolitan ara, now flows over finto three surrounding States, and this survey's fact-finding Irveals strange physical diversities in the environs of New York. Contrasting with industrial spots like Newark and Jersey City, or thickly settled suburban residence atens, virgin open cotntry also abounds, with wild dect seen in summer barely 35 miles from City Hall. And faiding vil-

fages, because of shifting traffic streams, have less than half the population they had 50 or 75 years ago.

In all New York, families are forever moving about. To find homes, workers crowded from the growing business reghons move to Queens, the Bronx, Richmond, and the suburbs. On once empty arens in Brooklyn ${ }^{\text {a }}$ as in Flatlinds and Flatbush, residential sections have risen. Farms in Queens turn into colonies of homes. Parts of shallow Jamaica Bay are dredged, and filled-in land becomes highpriced building sites.

These same growing pains years ago started big department stores moving uptown.

The city's northward march-fromi 14 th to 23 d Strect, from there to 34 th and $4^{2 \mathrm{~d}}$, and now on to 5 gth-is a familiar fact

Rapidly, now, more giants rise among the six-story pygmies, and from once shabby regions there grow up swiftly new colonies of costly apartment houses, changing the social and financial complexion of a whole
region, as about Tudor City, Gramercy Purk, Brooklyn Heights, London Terrace, Sutton Place, and the regions on both sides of lower Fifth Avenue. Thus daily the pattern changes.

BAPID SHIPTS OF POPUFATION ADD TO NGW YORN'S EVER-GROWING SCHOOI. PRODIEM
When at pupil moves from one district to another, of course he can't take his school seat with him. In Lower Manhattan you may look down from skyscrapers and see school children at play, yet busimess in many districts tends to crowd out residents and thus force extra children into already crowded schools elsewhere.

The stupendous task which the city faces is revealed in a few striking comparative facts. The cost of schools alone in 1929 exceeded the total cost of all city government in Chicago, Boston, Detroit, Philadelphia, or St. Louis; It was more than the total cost of government in such comtries as Belgium, Norway, and Switzerland.

Now the rolls of day schools alone carry more than one miltion pupils of all classes. Demand for education grows yery fast, since pupils, owing to American prosperity, are no langer content with eight years of elementary schools, In 1906, for example, only 38 out of every 1,000 pupils advanced to the high schools: in 1929, 143 out of every 1,000 were in the high schools.
This growth in high-school registration calls for more and more buildings to cope with "short-time" pupils. Better to equip its boys and giris for useful lives, the city expands and increases its tectmical high schools.

The Textile High School, for example, so practical in a city whose chief industry is the clothing trade, trains its pupils especally for work in that freld. In the evenithy trade schools close contact is kept with the lnhor umions; apprenticeship chasses are set up and run in coopperation with the unions and groups to which the pupils expect eventually to belong.

To keep children from traffic-crowded streets, the city also gives ever-inoreasinfe attention to indoor and outdoor playgrounds.

## IF YOU BTOOP TO STATISTICS

The story of New York is more than a catalogue of facts, yet even its many odd "Belleve It or Nots" hold a fascinating significance of bigness.

Its telephones would string 35 lines from earth to moon.

It uses 50,000 horses, yet pays nearly a million taxi fares a day.

It starts 23 new lunildings daily.
It burns 21 million tons of coal a year.
It has more than 1,580 churches and speaks scores of languages; has more than 130 hospituls and about 12,000 plysicians and strgeons.

Printing its telephone directories alone constitutes one of the country's largest publishing industries.

It is the book-publishing center for twothirds of all English-speaking people and the chief port of entry on this continent for bowks in all languages.

It uses enough new brick each year to build a wall 125 mites long, 60 feet high, and two feet thick.

An average of 5,000 wate hes are pawned every day and half a million people a year
are arrested for one offense or another. In the police archives are the records of more than 20,000,000 arrests.

Hand in hand with the Travelers Aid, welfare, and philanthropic groups, its por lice help tens of thousands of waifs, rumaway boys and girls, cripples, lost persons, and derelicts every year.

Also it has a new college especially for prolicemen.

To cover all fits 5,000 miles or mare of streets on a bicycle would take an old man-well, be simply couldn't do it at all. Somebody would rum over him.

## RISING LAND VALUES MAKE MANHATTAN THE CREATEST TMEASURF ISLAND

In less than 20 minutes one New York building was sold at public auction for $\$ 3,375,000$ cash. That could hardly lappen anywhere else.

The same anctioneer, another day, sold more than six million dollars' worth of real estate in one afternoor.

Time has not yet Beratched New York's face. It is young, as cities go. Even when Jenny Lind sans in Castle Garden, sea water, since filled in, stood between its island site and the Battery. When men dug foundations for the Whitehall Building they struck the timbers of an olid ship-pirate, trader, or frigate-sunk in some forgotten creek.

Indians, Dutchmen, Walloons, Britons, Americans-all have seet the magic growth of this Treasure Island. To-day tho one lenows whint it is worth; certainly more than a whole group of Western States. The assessed value of real estate in four of its five boroughs is about $\$ 18$,$000,000,000$. But land values in Manhattan alone are now greater than for the whole city only nine years ago.

Incredible as it sounds, it is a fact thint it the last two or three generations many land areas in New York have multiplied in value one hundred, two hundred, and even five hundred times. People yet living saw lots-whole farms nlong upper Fifth Avenue - sell for nominal sums. As late as 1845 a corner of Fifth Avenue and 42 d Street sold for $\$ 1,400$.

And there is the classic case of Number One Wall Street - it magic number that. What a psychological whlue for a bank! This site is commonly called "the most valuable piece of land on earth." In 300

MANHATTAN 15 STHL. THE MELTING POT
Into its polyghot pubtic schools flock the children of all racew. In this group alone runy be seen Austrian, Germum, Italian, Dutch, Greck, Polish, Humparian, Cicchostovak. Ukraiminh, ard Gypsy children weartif for as special octision the native contumes of the lands of their orgin.
years only three structures have stood here. The fourth, now going up, is the new so-stury home of the Ifving Trust Company, Its foundations, dug far down into solid rock, will be five floors below the street tevel. Besides the use of every modern tuechanical and protoctive device, its huge waults will also be surrounded outside the cotferdamlike foundations whith a wall of water!

Here one sees vividly how the struggle for space raises rents and the prtee of latud. As a rule, rent is most influenced by the numbers of potential castomers who walk past a certain site. It is proved that grod retail stores and banks can pay ligher rents than any other forms of business.

In Mid-Manhnttan, you sec anny tiny shops selling flowers, tobacco, or even a low-priced item like iruit juice, which pay amming rents, Mere nooks, worth only a few dollars a month in other parts of the city, rent here for fabulous sums.

But, of course, whethor an tradesman can afford to rent a given space depends on whit he sells. Otie estimate says that a small delicatessen shop on a crowded comer may get one customer from each G40 who pass, whereas a furrier gets one buyer only from every 20,000 perdestrions.

Land values go in waves, and there is tecession at times, as at that period between obsolescence and replacement of buildings: But a planec at the tax rolls shows loow the dity, is a whole. multiplies its land values. Some of America's lirgest fortunes came: by ever-tising Manhattan real estate.
SLUMS MAy 60 , BUT THE FDot ABE WITH US ALWAYS
Fart Sile slums, long notorious for poverty and congestion, are passing By a lite survaly an herage of one tenement in five was found vacant. The story of this change is interesting:

Into these slums for years poured a humait tide from the ghottes of Europe. New arrivnls, strangers in a strange land. stopled in New York and joined other groups of contritymen or relatives already here instead of going on to other Amertcan cities Year by year, then, this influs added rectuits to these forcign colonies The neweomers, often without jobs lomg after atriwal, were suppotted by the clats among whom they settled.

Then came immigrant-quota laws, cutting this stream to a trickle; alge, with the World War, came highest wages and the longest period of prosperity America ever knew. So, even in the East Side, many men grew rich from the fur and clathing trades, from real estate and other operatiotis. For the first time in its history, then. the East Side, with higher income and fewer dependents arrving from Europe was able to get on its fect economically.

In the past ten years many of its once poor, crowded tenants have quit its squalor, moving to Brouklyn, Quems, and other better places. Even more would have gotic, too, but for happy changes in the district itself. Rents there are still low, bat dark inside rooms are to more: remodeled tenements are the rule now with bathe, fancy wall paper, plenty of light, and more playgrounds and schools for children. Streets are widened; parks appear; fancy stores, with bright plateglass fronts, where once stood the oforiferous herring shop. There are many muvies, too, and even night clubs and neighborhood theaters, with prograns in Yiddish, Italian, and Greelc mixed with English, I heard an Italian mother in Muiberry Strect corfect her children in Italian for betup too noisy; whereupon they replied in Englisti!

Shiny new automobiles, belonging to Fist Siders, loonk arrogantly at bearifed old Talmudists pushing their apple carts hastily out of the way - out of thie way of the man in the new mator car who not long ago pushed a cart himself. In that incident is the story of the changing Enst Side.

Walking down some strects, ats thlong puits of Houston, you may still have to dodge when garbage is dumped from windows overhead. Gramd as at kaiser's palace is the grill and mertle of police headquarters: fout across Broome Street family wish flaps from fire-escapes, and a block off in Mulberry childret on roller slates play fag among tiers of caskets on the ground floor of an undertakerts plice; a wonain breaks up an old wooden bectstead for kindline and an aged, shablby man. puthing worn shoes along a wet pavement, hesitates and cyes futtively an open garbage can.

Poor there are, of course, and ever will be, as it is written; but New York is not unkind.

# THROUGH BRAZIL TO THE SUMMIT OF MOUNT RORAIMA 

By G. H. H. Tate

AHUGE table-land remote, forlide dings belted by stupendous precipices of cratgy sandetone, towering etermally among its thantling cloudthat is Mount Rorame Rising calmly, gradually, at a point where the Brition Guiana-Venceucla-Brazil boundaries meet, it surveys its world.

It is very ancient. Picture the enrth some three lumdred millions of years ago, when Romimn was, as it were, borm. No mouttain thet, but a part of the bottorm of vast, shallow lokes and deltas.

Ages passed by, durimg which the land rose uniformly and gradually; lakes dried up or drained away; sands and silts became compacted and cemented together into at level tract perlighs as great in area 145 New York State.

During further millions of years the strata were infected by great "sills" of molten rock, coming no one knows whence, that actually floated the topmost two or three thousand feet of sandatone beds.

Still linter, long-contimed erosion etched atway the softer sandstones and dissected the new piateau until it lecame seflarated into great blocks that successively grew smatler and crumbled away.

To-lay the sale remmant of the ancient falee bottom is the Roraima group of tablelands. Roraima itself hasacres of its surfrace lined with perfectly preserved ripple fuarles of Palcozoic (or ofler) waters:

## DON4 A MYFTHROUS MAGNET TO Explomers

Mount Rorainth has ever been a magtret to the explorer, calling, yet defying him to solve the mystery of its ofigin.* In his tum, each man las wrested his mite of knowledge from the region, and the sum total of their discoveries shows in the picture I have attempted to draw.

Fossil records are entirely wanting. Doubtless pitimitive fishes, gigantic salimanders, dinosaurs, pterodactyls, and early mammels swam, or crept, of roamed, or

[^5]flew, during theirappointed periods, among the lokes and plains of the territoty; but the censeless weating away of the rocks prevented the preservation of the smallest evidence of their existence.

Recently the generosity of Mr. Lee Garmett Day permitted the American Mugeum of Natural History to send a small. but well-equipped, expedition to the platenu. As the leader, I was accompanied by Mr. T. D. Carter, from the Department of Mammalogy, who on this occaston gave his attention primatily to the collection of birds. Mr. C. M. Tate, my brother, artanged to go with its in a supernumerary capacity, ready to furn his land to any work requiring his attention. He was helpfut in tahing entire charge of the commissariat of the party. In midsummer we sailed from New York for Pari, Brazil.

## EEW TRAVHLHS HAVE BHACHED HORAMMA'S SUM MIT

Several travelers have visted Rorainta. Comparatively few, though, lane reached its ssommit, and then generally have remained only for a few hours of for a single night.

Our imperfect knowledge of the animal life of the table-land has been derived from several mall collections, which, though they often contaited a lligh proportion of tew forms, have merely served as appetizers to scientists.

Such unusual varieties as Diglossa mitjor, ratest of the honey creepers; Thomusomys meconnelli, the only mammal recorded from Roraina; Heltanthora nutans, a very beautiful pitcherplant and the only kind krown from South Amerricaall these suggested untolal biological riches awaitity discovery.

The ohject of out expedition was to obtain specimens of all known spectics, thet at the same time to try to lring the list of the fama and flora of Ronama as mearly as possithle to completion.

For such work, time is an essential factor. Equally impiortant is a complete and ample equipmeat. So far as we can tell from accounts, the pioneers in the Roraima region were somewhat hampered

## GRATING CASSAYA TUHEHS

The nical is fresed to expel a poteronots fuice, and luter is bahed on lut stones (eer opponite fage). The truty wor cut the day bofore from the burk of a farcot tee.
in just these prorticulars. Sir Eohert H. Schomburgk, on his explorations between 1835-39. worked in this region, and returned later to survey the boundary. His brother Richard made collections of the biota. In 188 , Everard F . im Thurn had the vision and handihood, after espying the faintly marked "ledge" through hif field glasses, to cut a trail through the forests and work his way up the narrow shelf to the plateatr; and fater Jolin J. Quelch, sick and ailing though he was, maintained himself on the top in only a little lirtish shelter for nime days.

Ouf expedition spent two weeks on the mummit, but wo had tents and food and were able to keep fairly warm.

## PROLFHDNE BY INCHFS THBOLGH HATHA

Becanse we coult obtaitn porters there tunch more casily, we decided to approach Mount Romima from the south. The route lay up the Amazon to Manios, thence on up the Brano to Boa Vista, and continued by the River Surtumu as far as the linit of steam-launch navigation. A fterward beholf us with our goods
pilled high in a large boat, dubbed the Pig and Wallow, fighting our way through four great raptids toward the junction of the River Cotinga with the Surumul.

Our Indian boatmen worked waist deep or breast deep in the torrents, now planging forward with the long tow rope, which they made fast upstream to al tree or a rock; afain straining grimly as bit ly bit they inched the boat onward against the current. None but river Indians, skilled in the management of canoes, and expert swinntiers from childhood, cat accomplish such labor without becoming utterly exhanster.

The only considerable interntiption to our journey occurred at Limmo, after we left the river. Another expedition, under the leaderstity of Gen, Candido Mariano da Sliva Rondon, was bound for Roraima, its objective being to make al recommaissance of the living conditions of the Indlan. tribes and of the resoarces of the border region of Brazil. General Rondon is appointed officially by the Brazilian Government as chief of all the Brazilian Indians: Among the tribes themselves his

name is reverenced; his person is held to he ulmost a god.

The general was expected momentarily In Limio. From far and near the Indians gathered-men, women, and childrenready to do his slightest bidding.

WH JOIN FOLCES WITH GHNFRAL RONDON
Although Limion had becoule almost a Mecta and hundreds of Indians swung their hammocks wherever they could find rooth, 1 was umble to persurde any to leave with me for Rorama. They wanted first to see the general, they said. So 1 hired a horse and rode sonthward for two days, to Säo Marcos, the general's base canne, I found him courtecoss and attentive; also, widely read, anthoritative, and in manner the ideal of a soldier and a gentleman.

In Sto Marcos we conseived the plan of tuniting our two expeditions for the overland trip. General Rondon was about to drive a herd of cattle through with hitn to Roraima. I had with me quantities of farinha, made from the manioc, of cassava, root. He undertook to provide the
protelids; I the carbohydrates for our porters.

At lant we started-a great train of trote than 300 Indians, youns and ofd, women and men, many of the former with their bahies riling on the rops of their toads. Progress was very slow with such a concoutse of people.

We crossed hot, arill grasslands studded in parts with conntless pagodn-shaped ant bills or relievel bere and there by green swanmps and palm-fringed lorooks. and on the third day we reached the village of Bartu, on the Miang River. Consisting of a score of palm-thatched huts, Barro is by far the largest villnge we saw during the trip northward.

The trail now enters the hills and pusses through masses of granite bowlders, annong which the Minne wetves its way. After fording this river twice we came to the upper Minge Valley.

This is a wonderfully tich patt of the country, with its dense, humid forests and its lyoken sayannis. Here is the home of deer and howling monkey, of gatan and araconda.

The small mup it the left shows the lofty tableflum situated where the lowitares of Vencurchi, Britifh Cuiana, and Brasil mect; the mip at the right shows the route by which the futhor's expedition apprinuched ite objective, and in the center is Hhown in detail the mysteroun faured rock ristics from the phat the the prow of i great ship from the sem.

Eefore us rose the Serta Pacaraima, a great motmtaft range which marks the boundary between Brazil and Venexuchs A whole day was consumed while we totied up and over the Pacriaima. At its summit we foumd ourselves for the first time standing on beds of stindstone. Toleft aud tight rolled great grassy hummocks, while below and behind lay the Mine Valley, its jungles and muadowlands now redaced by districe to i patchwork of deep green thetrating with pate brown.

The event of the day, bowever, was the view we had of the talie-lomds, Kukenam and Roraima, with several other mountains farther west. Although mist and clond wreathed their fops, theif sheer sides towered starkly ayainst the afternoon sky. They were 40 miles away.
Using three very insecture canoes with open ends, we crossed to the west bank of
the Kukenam River and pushes on rapHilly over broken ridges, veering gradually round to approuch our soat from the southwest.

##  BLTVATID MTAT

Three dnys later we lay at fall leagth on the creat of a high ridge a short way Irom the mountams, infaling the invigorating air fond rejoicing that otir quest wat so nearly over. The twin gitints, Kukenam and Romima, lonmed before us serotic and majestic. Flat-topped and of almast equal height, they towered alove us for some 4,000 feet, 8,600 feet above sea level.

Their seamed and crakey prectipices. that present an almost impassable barriar between hase and summit, glawed red in the lateafternoon light. Discolored patches

## ARABUPU, A VILLAGE OF AHECUNA INHLANS

The houmes are butt cither round or oblony with the ends rounded Fire has phased throuth mueh of the foreat of the neighborhood (sier text, page 5gd). Thic village occupter it cortrer of the shxamas bordered by jurste (sec, alsh, lluwtrations, puges 999 and 600 ).
and the numerous cracks and clefts travcrsing the cliffs from top almost to base were pricked out in shap contrast with purples and blacks. Threads of silver, yossamer-thin, stretching froms top to botfom of the walls, were falling streams that broke below into glittering spray, then gathered their waters anew and hurried tway to the distant ocean.

The precipices of cliff-girt Roraima and Kukenam do not rest directly upon the surronuding plain. They stand on pedestils of volcanic rock whose great slopes, conmencing at the foot of the precipices more than 7,000 feet above ssa level stretch outward for some five miles before they finally merge with the $\$, 000-$ foot plains.

Starting from base camp, one must climb more than 3,000 feet of steep slope
before reaching the sattdstone cliff to look up at projecting rocks of the summit, directly alove, yet distant almost twice the height of New York's Woolworth Build14g.

The southwest wall of Roraima (which we first viewed) is about four miles long and terminates at its southern end in the remarkable Towashing "Pinnacte" of Conan Doyle's "Lost World" fame. On the other side the southeast wall has a length of perhaps eight miles, Roraima would have a tectangular outline were it thot for the preat gulf eaten back into its miss from the northwest, of which I shall speak later, and which occupies ahout a fourth of the rectangle (see map, page 588). The smaller motntain, Kubenam, very irregularly rounded, bas a dameter of three or four miles.

## ITE 13 DENTH AND DHSTRUCTION TO TERMITFF

The ant benf, of ereat anteater, shambles from otic mill hest to another and tears open the hatd clay hille with the hute rectrved claws of the forefect, As the atts swarth out, his wormilike tongus, covered with a glutinious salive, darts here and there, cetlecting a mouthful of termites, which mu4 be eaten in chirnuous numbers to nouribh his great bulk His diminutive mouth contains no teeth. At rest the ant bear looks the a litip of dead krass, for his coarieg wiry lait is black and dull fawn in oolor and his tail bears a lieavy buth of longer growth.

As we drew yet nearer we thought we coutd distinguish the "ledge," which is the onily lanown way to Rorainti's summit, a dark line slanting ohliquely across the red cliffs (see page 598).

## A RECHNT \#IRH HAS DHSTROYED RORAIMA"S Fortist

One great disappointment awaited us. Of the vast forests of which Im Thum (see text, page 586) and others speals as ciothing the slopes up to the foot of the cliffs, almost nothing remains. Some two years before our coming, after a prolonged drought, fires swept through the woods and left only a desolation of charred sturnps. Much of the ruin is already masked by a dense growth of poleweed and bracken, hut years must pass before the hideotusness of whitering tree tranks can disappear. I rather doubt whether an equally magrtificent forest can ever grow up again.

These fires are started by the Indians to open trails and destroy snakes. Custom also plays a part. When a mati gocs to visit a trighbor a score of miles away, he lights the grass to give warning that at friend is coming.

We established our base at the Indian community of Patho, some eight nuiles from the base of the cliff. I was in no hurry to tackle the upper part of the mountain. Time was needed to become friendly with the old chieftain, Schoolmaster, and his "merrie men," and to gain their confidence, since I felt that much depended tpon their codperation. Besdes, 1 wished to reconnoiter, to plan broadly a scheme for cotuducting our attack on the Roraima stronghold. So we settled down in one of the thatched hotses at Patlo, organized out plans, and sorted out our equipment into some semblance of order,
The Rondon party, on the other hatid, hiving littic time at its disposal, at once
commerved opening the trail to the plateat. On the day of their climb we three walked up to their camp from Patho and contitued with them to the sumbmit. We returned the same afternoon with a perfectly clear understanding of the conditions we should have to meet when we encantied there.

INTTANE HMOVE EXCFI: LFNT TM ITATOHS AND MNREBMH2
Our Indians were a constant source of interest to its. The Arecmas of Roratimat are rather sumill in stature. but muscular and well formed. Mentally they ate glert, inquiring. and intelligent.

Imagination is strany among them. When Carter dipped a tegative of one of the women. whicli he had just shown her, into the fixing bath, she pretended to shiver with cold. Imaginntion with a sente of liturnor:

They ate matural actors. To see old Schoolmaster innitate the shooting of a jaguar was nimost worth the whole journey. He danced warily farward and backward, feintel, made litthe side leaps, leveled or branilished his ancient tumzele-loader-and all to the accompaniment of explanatory voltmes of guttural Arectma.

The Indians can itnitate the calls of birds and animals almost exactly, In fact, they sem constrained to try to copy whatever notses they hear. With no difficulty whatever they reproduced the clirking of my typewriter and the swishing sounds of photographic solutions betry statken.

They are wonderful marksmen with their own weapons. One of our young lower lif from the inside.

tain cloth he ntakes it futo garments. Me seldom wears them, though, and prefers to keep them for festive occasionts. For mast of their lives the women wear closely woven bead aprons and the men red loin claths.

The woods are still peopled by devils for the Indians. Every village has its pi=ai man (witch doctor), who spends his nights dancing and howling weird incantations and lumning incerise over little fires, and his days blinking owllike at the sun and collecting fees frum his patients.

Thotretaplioy T. D. Cirtit
A curipus Arecuna legend, another version of the Delage tradition, was trantlated for us by the Braziltans:
"Many, many years tago all the land was as high as Rorainin amd Kukenam, atid the two mountains were joined together. Many people dwelt there, and among them three brothersAnticeron, Anike, and Machmamn. The land was very fertile, eqpecinlly in the neighborhood of Bananatree Mountain ( Ualaratipu, west of Kukenatr).
"The brothers were: joint owners of mucli of the fruitul land. They became jealotis of one amother and gratreled. One cut down the lyanana trees, and from the stump of the last of them, now trimed into a: пubuntain, water pushed and flooded the whole world. Mactnamin was drownod.
"As the flood ahated. the land between the mountains sank down fund became tis it is to-day.
"A In anif ndrited Cera-cera appeared from nowhere in pirticitlar, collected the bones of the people and nomals, and brought them to life सgain."

For services rendered by our Indians we paid chiefly with cheap cloth, but also we gave thread, needles, mirrors, fishlooks, salt-and lipistichs. These last were great favorites. Adolfo, the Pernvian A1ssistant, was our offictal demonstrator $\ddagger$

## ARHCLNAS STAY TO COLHPCT EHD

Leaving much of our material at base camp and impressing upon Schoolnnester
that he must see that no one interfered with it, we moved from Paulo up to our first collecting station, Philipp Camp, 5.200 feet. I have adopited the fume from the Rondon party, who called it after Dr. Philipp von I, uetaclbutg, a botanist. It was remarkable chiefly for the vegetation in a Hear-by swamp, where grew great purple bladderworts (Calpidisca lumboldtii).

The situation in a grassy savantia between idges was very pleasant, and I tused Philipp Camp as an intermentiate hase between Paulo and Summit Camp. As a mark of their esteem, four Arectuns resolved to stay and shoot birds for us with their blowpuns. We owe nerriy all the Philipp Camp birds to this quatet's keen eyes and umerring tim.

I had plamied to break the downward journey with a third station at 6,900 feet. where I encountered the several rare forms of birds reltricted to Roraina that Frederick V. McConncll and Quelch and Honry Whitely collected years ago.

## THE ASCENT TO THE SUMMIT

The ascent to Summit Camp, though tiring, was in no way dingerotse The ledge (see text, page 592, and map, page 588), which from Panlo appears so insecure and tiny, proved to be a broad slope of soil and reck detritus large enough to hear a good growth of forest, and for the greater part of the climb one scarcely realizes that there is an abyss 50 feet to the left.

Matopriblify T. D. Curler

## A HLOWGUN EXPERT

All the Indians of the Poralma retion are lingtily stilled in the use of thil weapon. They blow at ta-inch pilmwood datt through ati 8foot tuhe and seldom miss the mark (see test. page 593).

We established our camp in the only site at all suitable, the one occupied by every explarer since Im 'Thurn's time. Cemented in the rock wall we found the little brass plate left by Mr. and Mrs. Clementi, I took a pencil rubbirg of it. It is inscribed:

> C CA \& C C
> Gont Secy Wife
> ysitel Jany tolk
> God save the kitig.

The atnphitheater is not really typical of the main platean, to gatn a proper understanding of which one must find a way around or over the morros that eat one off from the great central plain to the cast. We succeeded in climbing to the top of a hillock about so feet above camp. which we nicknamed the 'Tiger's Ear (from its form), prolably the highest point on Mount Romimat.

The Tiger's head is unmistakable when seen from the camp. Carter and my brother made a flag of hanukerchiets and with considerable diffeculty tied the pole to the "Ear."

Seen from stach a vantage point, the central part of Roraima appears a va-t, harren plain. The have drfting over the scene, the desolation and uttur lack of comparative objects, cause one to lose nll sense of proportion and distance. Exeept on the north, the almost featureless plain seems to reach away to infinity.

On the morthern side, though, a surprise awaits one. Hidden irom Patulo by the Hish ridge connecting Roraims and Kttkeuam, atud consequently apprarent only from the top, a huge emliayment has catem back into Roraime's mulss foom the notthwest and nortio and has left only a comparatively narrow, much-dissected tongue of rock to form its eastern wall. We came to think of the whole mimitain as an foland and we named this gulf the Great North Bey.

The first titne I looked across the bay at its copposite wall I noticed that part of it, perliaps a quarter of a mile fin width, had ant casy slope of 45 degrees from the top downward. Here, I thotght, is another way up Roraima When bext I fooked the mist had rolled away and I saw that the slope ended throughout its wifth in a 300 -foot prectipes. The floor of the bay is covered by a rolling sea of forest nind hiss. I fudge, in very heavy rainfall.

Standing on the rim of the Great North Bay, one secs a pratt of Kukenam Moumain invisible from below It reaches well to the north and ends in il fatge istand table-land separated from the parent mass by a cotinparatively narrow chasm, perhaps 150 feet wide and 1,000 feet deep,

Then, too, the coninections hetween Kakenam and Romima (mamed by ur the Notch) is by no means a pass through which one an travel easily from the south side to the north, but a ligh. narrow laniferedge of rack falling steeply away on its northern side to the tributaries of the Kaloo.

Attempts to explore the phateat were attended with much dif. ficulty at first. Water tins dissected the forizontally bedted stitrilstotus, abotriciug in fussil ripple mirtes. into on veritable make. Shallow gorpes, from 5 to 20 fect deep. wirtl in all directions, deepening wherever they colincide with joint eracks in the prock to crewasses of unknown depth. Within 100 yards of the edfe, erosion has scoured out the gullies into inmpense tifts; and cracks parallel with the cliff, and varying in width from a few inches to as many feet, forecast future great rock falls.

THE GHEAT CKNTRAL RIPT ALMOST MSECTS RORATMA

This species, Prornias nurtepurte, is mumeroum from Cotinea Rever to Ronimit Its heal is collec-brown its body iflveregray, and itm wiugs block, From ty throat lane lome, blact, stringlike wattles
vinced that the estimated area of 50 -odd square miles is a great exaugeration: probably 25 is nearer the truth.

From the middle of the southwest side a great rift rums back in a direction somewhat north of cast for more than halfway across the mountnin. I suspect that it gives rise to the large overflow of water that gushes out from a hole ahont 100 feet up the cliff onto the ledge near its foot. This water fall appears only during the beaviest rains, but then in tremendous volume.

The Great Central Rift, as we dubbed it. has at its head, near the center of the mountain, quite a wealth of small arboreal vegetation similar to that flanking the morras.

After crossing the Central Rift on a great bowlder wedged between the walls, we found our way as beat we could, over at much-broken piece of country, in at southeasterly direction to the Central Swamp. This bog is the largest plece of marshy ground on the platean, being ahout 200 yards long and 75 in width. It resembles a very shallow pond from air few inches to a foot in depth, dotted all over with tussacks of pipewort, yellow-eyed grass, and sedges.

Mr. Benjamin Ronton visited it and reported a pair of wading hirds which were extremely shy. We were umable to verify the olservation, althutugh we visited the place on several octasions

## JOY IN COTLFCTING STRANGI CREATURUS

Most of our time was given to collecting specimens of the animals rind plants on the summit. While aware that none of the startling creatures of the "Lost World" could ever be motountered, I experienced that excitement familiar to every hunter and collector, as I traced out my line of 300 trapls among the rocks and bushecs.

In every tenth trap or so 1 found some creature whase like occurs nowhere else in all the world. Carefully 1 wrapped each little furty body in puper and stowed it away in my kriapsack.

As il haited and reset each trap, try eyes searched keetly for more telltale signslimrows, rtinways. droppring-and my ears were alett for the cheep and twitter of somber-plumaged little binds hidling among the low brush of the summit. Amid the emurk of almost perpetual fog, such an existence as these creatures lead seems to us unbearable: yet it is all they know.
Creeping slowly among the rocks and reeking mosses were numerotes tiry black toads:

I delayed collecting the strange and vafied plants of the summit until just hefore teaving the plateat, becanse of the danger of mildew in strch a climate. However, long before then I had listed all their habitats and had ontly to make a few excursions to sectre them.

Far in the interiar, at the edfe of the Central Rifi, a plant grew which I saw nowhere elte-a St. Johnswort. All about camp, ferns with fronds shaped like longhandled ice-cream spoons grew bencath overhangitg ledges. Starlike vermilion flowers blossomed from cracks among the rocks everywhere.
With in mingling of sedges and sumdews, square yards of closely pached pitcherplants formed cushions of soft vegetation into which one often sank nearly knee-deep.

When not trapping and shooting, we searched ant all the smaller crentures. Among the damp vegetation, under rocks. in the clear pools of the summit, in every possihle place of concealment, we sought beetles, spiders, centipedes, and whatrot

I made collections of those insects atfecting certain of the leading types of vegctation, stuch as Bonmetio, Didymopesmar ( (cliated to our giniseng), beaths, cotriposite bushes. This was done both by searching the stems and foliage of the plants and by beating their lranche alhove an inverted umbrella. Maty small weevils and spiders were taken in this way:

With nightfall and the lighting of the gasoline lantern came it host of tiight moths, daddy longlegs, and flying ereatures that, despite our search, we seldom found by dry.

## DHSOLATH SUMM1I EAMP

Summit Camp was a desolate place. with the gray mist of late afternoon driving over and the steady drip of water all about u5. That was the time when the little flag at the peak of the tent drooped discongolately against its pole. That, too, marked the hour when, wrapped in our warmest clothes, we called loudly to Jose, the cook, for food and drink Some of our negatives suggest a camp site among hummock ice in the Arctic regions. At times we could almost believe that it was

Even to pitch camp in a place where there is no level gromid, where you cannot drive a tent peg, and where there are no tetit poles to he had except those you bring up a thousind feet, requires a little ingenuity. We anchored our tent ropes with stones and spread our heavy tarpattlins from rock to tock.

## WHETE "LHTHE M1ETS THE EYF SAVH ROCK"

 fighi) -afe conbsicyaus features on Roraima's summit. On the other hand mhat of the gray shapes are formintar that a porsou might easily lone fif way wanderine ubout, especially when the rabumtian top is weiled in its thal mantle of mist (ser, nito, text, phege g99).

Fog on Rotatime not only is disagreesible, but has an annoying way of blotting out for fouts fogrether the picture that has cost much scrambling over stippery rocks to seek. For the greater part of each day great cottony clouds billow up the clifts and tower on upwatd for a thousand feet more. Quite often the mountain is walled in by mist, but the sun shines down brightly in the center. Then a touch of wind, and the cloud sweeps over, blanketing every feature.

The Brazilians very appropriately name the sandstone pedra de amotar, of gritudstore It wore out our shous in short time. In a couple of days ny dog's claws wore down to the quick, so that he lud to learn to cling with his pads, tree-toad fashion, when he jumped from rock to rock:

The summit vegetation is chafely conffined to the edges of the sandstone morros. For the most part its character is heathike, but many fierls and a few undernourished-looking trees grow there.

Of the animal world many groups have representatives on the plateat: birds, 11 : mammals, 3 ; the tiny black toad; numerous athtopods, most of which are insects-

So, instead of finding a rocky waste supporting thext to no animal and vegetable life, we have defluite record on Roraima of more than 120 kinuls of living creatures, more than 90 of higber plants and ferms and many mosses and lichens.

Some weeks later 1 looked back at the twin mountains, almost obsetred by black clouds, Quite apart from these wonders of Nature and the strange plante and animals thet dwell there. I like to think of Eornima as having persomality. Utterly cold and aloof, he inspires reverence rather than affection. Yet the Indians who played as children and grew to manhood at his feet seem happiest when within sight of his frowning cliffs- "Ru-ru-ima, the Father of Waters," is allygy, or calin, or speaks through the thunderstorm. Is he kind? Docs: he ever smile for his Arecuma children?

Ahove the ancient fort commandine Thorshavn flies the fare that proclaims the iulande a Danizh prosession : yet the iffinderi proully anmumee that they aro not Duncs, but "men of The Faeroes." Sented fargely by Narweghats, the archipelago remains unter Danish soveretgoty through zin overaght in the freaty which wan drawn uf following Norway s efoesuion from Denmark ft 1814 .

# VIKING LIFE IN THE STORM-CURSED FAEROES 

By Leo Hansen

## With Ilustrutions from Photagraples by the Author

AMOTHERLY hen clucking to three wild duclelings strangely out of place in heer landlubber flock!
Such a picture Denmark presents, as shic scratches vigorously for better times for Iceland, Grectlund, and The Faerocs. To the last named, particularly. Detmark las given muchattention becanse they luve been made economically sick by changes in worll trade.

Four days out of Copenhagen, pust the southern point of Norway, beyond the Shetand Islands, we came at last to Thorshavn, capital and chief port of The Foeroes, for which Denmark labors. As the TJaldur came to anchor betind the sheltering arm of a new conctete breakwater, much evidence of Danish aid was vigible. I saw in the town, but out and away from the haphazatd roofs of the dwellings, the new hospital and the ligh school, Over the barren lills went a procession of Government telephone posts bearing the wites which now make possible communication with six of the 17 tnhabited islands. Indeed, the Tjaldur itself is an evidence of Dantsh aid, sime the Government helped the islanders bury the trading steamer which plics regularly between Copenhugen and Thotshavt.

Still, The Faeroes remain practically unchanged by modern civilization and untouched by the tourist. Modern civilization can find rio foothold on their windy cliffs; there life can exist only when modded on ancient, primitive patterns, And so the islanders, forever wrestling with waves and winde, have little time for the tourist or his money.

## THE PAEROFS RIDE THH STORMY ATLANTIC

Like the ginnt battle fleet of some lat-ter-flay Thor. The Faterocs ride the stormy Arlantic, straining each at its anchor. First comes Myggennes, in the "destroyer" class, talking against her 370 -foot bow the Atlantice biggest waves. At leer stem is Yaago, a "battle cruiser" by comparison. Then conte the "drealnaughts" on a brond fan front: Syderö, Sando, Ström (the
fargest), and Ustern, with the smaller Kulso., Kumō, Bordö, and Vüderō ranging along on the right. The group also contains even smatler istrinds (see page 610).

Fach of these islands rises from the seat with flanks as sheer as a ship's sides and with a plateau top, flat like a ship"s deck. In all The Faeroes there is only one small, sminty beach of a humdred feet or so, a beach which is considered such a rematkable gift of Nature that the big ishand of Sinidö takes fis nume from the tiny stratul.

Pasalt cliffs rise majestically on all the islands. Some tower nearly 2,000 feet above the reatleas sea, and against these black barriers the Atimentic sends ber mifghty waves, to break with explosive force and burst into probably the most remarkable clouds of spray and surf to be found in all the world (see prege 608).

## SAFI Hatrnots A RANITY

Thorshnvn I murde the headquarters for nearly 200 trips to photugraph the Faeroese people, the astoniahing cliffs of their islands, and the populonts colonies of seat birds inhathing those clifis. It ts more necurate for mie to say that I "started" on 200 trips, because many were futtile. Bad weather in The Faeroes is so very had. tide ripis are so tricky, and safe liarbors such as rarity, that often my compationt and I were compelled to turn back to our base.

In Carl Bech, the officinl Govermment veterinarian in The Faeroes, I found at Thorshanvi a staunchisissistant, who made possible my photographic survey of the arcllipelago. He was born in the islands and his carly training was such that he swimts like a seal and climbs like a mountrin goat. Education in the veterinary school at Copenhagen had,however,opened to him as world unknown to the provincial islanler. His duties, which require a professional visit to every Inluabited tsland in the archipelugo at least twice at year, draw on his boyhood sailing experience as well as his education.

SEVENTEEN OV THE PABROES NRE ENHAEITHD
Twenty-two thoundad hardy iffonfers eloe out a pincarioun existence on sto square mime of starm-swept clitis.

Most of the 23.000 islanders know Bech ata it friend, a bencfactor, and one whose cournge matches that of any of them; 50 his introduction brought me copperation from the natives which I should not have had otherwise.

## SURVIVALs OF VIKINE LIFL

Soom after I taet Bech he took me down to "Thorshavn's shore to see his motor boat, the Thusk. Once it lind been a to-bared 26 -foot, Vikinglike mitive boat. The Faeroes were settled by Viking chief s, and surprisingly many strwivals of the ancient life continute to this day. Especially is the influence apparent in the mative boat, which is high-sided, narrow, and pointed at both enics.

Bech had carried on the spririt of his forefathers by mounting a carved Viking fagurchead on the prow; also, he lhuitt over the forepart a cover forming a snall cabin. which undoubtedly tuined the Tusk artistically, but it once saved our lives. The $20-\mathrm{arm}$ power of ten stalwart islanders. which once sent the Tusk flying through
the waves, he had replaced with a 2 -cylitider motor.

Sufficient proof of the little bost's senworthiness was established by a i,000-mifle trip Bech made in it from The Faerocs to Copenhagen. Its proud owner declares that he will yet cross the Atlantic in the Tusk.

## 

We clugged out of Thorshinvis tunchorage one morning bound on our firat extended survey expeditions. Videro, the northernmost of The Faeroes, wats our destination. When the island cane in sight it loomed up impressively, like the companion tstands which we hat prosed en route; another massive cake of stone bounded by wave-washed cliffs-a blueblack sceberg: The Tusk floated along under Viderós sides tike a chip in a tatiner's vat. It seemed to we that going ashore was like tying to board the Leriathan from a skiff.

At last Bech reached a break in the clifts and piloted the Tust through a gap
to a tiny harbor, safe from the wind, but not from the swell, which sent the water splashing ngainst the rock ledgea that were to serve us us a landing place I took off my shoes and in try heivy, waterproof Facroe wool socks crouched waiting in the bow. Shoes cannot be trusted on wet, slippery rocks. In my lund was a rope. Bech brought the Tusk near the ledge. A wave carried the boat up and in 12 feet. to feet, 6 feet. 1 jumped for the rock. Bech threw the motor into reverse, racing backward. Smack, the wave hit the rock, but the Tusk was not with it.
I clung to the best handholds within rench and dug in my toes. As Bech backerl away, the rope, whose end I held, tam off from the Tusk's deck. When my companion hadd lowered the henvy anchor, the boat swung around to the pulliof the ontgoing tide. Indeed, to sail amony The Factoes fi man must lonow the tide changes of every inlet and all the strange tricks of the tidal currents anong the islands. Seldom did Bech anchor the Tusk unless the tide was going out.

Now came my part in the difficult process of landing. I pulted on my rope, bringing the stern of the boat near enough to shore to permit Bech to pass over the cameras and luggage. Then be made the fump ashore and 1 slackened the rope, permitting the Tusk to ride at a safe distance.

## IT IS HARD TO NHEP DRY

That is how we landed on Videroे and on every other island, and how the mintives themselves land, if everything goes well. Three times in the course of cur expeditions, however, my jump was too short or the rocks were too slippery. Into the cold water 1 plunged. Bech was ready always for such an necident. Quickly lic would pull on the landing rope, to which 1 leeld firmily. Thus the Tusk, moving out, dragged me away from a battering on the rocks, and in deep water I would chimb aboard once more. Wetting was not pleasant, of course, but since in The Faeroes it is impossibile to keep dry, once away from a town, I learned not to mind being damp. After a submergence I always dried off to my usat degree of dampness in the sum of befide st campfire, if we were in the hills or at a farmhotse.
In one tiny, rock-walled liarbor inlet we were not so fortumate. Bech was making

SAILING UNDER A NATURAL HRODES
Layers of lava rock laid down by old volct poes are ocensiotially fitterrupted by rock wedner or fithes of different congist they. Pounting surf wear away the dithes first, openime ereat cuver or carving deep, fordlike inlets which provide sholtered tanding places.

FVERY FAEROE GHL LEANNS TO ENIT, EVEWH BOY TO ROW A BOAT
we lintied aloord, got the engine going, and rushed out to sea. where there was nu wave the T"usk couldr"t ride.

Our artival on Videro was unusual, since the istand is probally the bleakest of them all ind therefore visitors seldom land here But the effort pays, for there the dwellings are of the most macient type, customs have been handed down unmodified, and it is such a colony as Leif Ericssons mifght have planted.

There is mo town: not even a store. Low stone farmhouses, half sunk in the ground and girded by outer store walls to escape the violent winds. cling to the barrens. Sheep grave at will.

THE SMONF TOOM HAFKS HMEFTOVIKIND FEAST HATIS
So poot is Vudero that only one house.
a professional call to treat a stick poty. He ran the Tusk to a bottlencek inlet and, while I stayed with the loat, he jumped ashore and went up the hill. A few minutes later he saw one of the sudden storms bearing down. Deserting the pory, he began to rum for the boat, sliding and tumbling 150 feet, directly fitto the cockpit. There was no time to lose. We headed full speed for open water, but a gust of wind and a wave hit tis at the inlet entrance. It threw the Tust toward the rocks.

Beck shouted to me. We both jumped over the side of the boat. With our fingers clutched on the gunwate and our feer against the rocks, we held the boat off until the backwash carried us out. Quickly
that belonging to the schoolthaster, in very great ntan indeed, has a "glans romm." Such an extratagance is not for the averuge Videro dweller, who lives with his family in a "stmoke room," of a converted smoke toom. The smoke rom, which was once typical of all rural humes in The Faeroes and still surviver in many, hatks back to the feast halls of the Vikings. Usually it is large, since it is often the only roon in the house, except the stable befow it for horses and cows, and must serve for the entertainment of the netighborsas wellas for all family uses. Around the room there are no windows; only the entrance door and thase that open on the otiginal "Pullman beds." which may be single- ot double-deck.

THOHSHAVK NOW TOAST\& A H1GH SCHOOL
The Faeroes afe neither a ғnare of income to Denmark nof a market of any importance for Dantah gopds. Neyertheless, the mather country works curnistently for The Fuerots exacofing ellocational and medical pervices, promoting communication and the marketing of colfint:

A NEW HRLLOE WITAL TO THH FATROES' TOAD BYSTEM
Two automobiles, both Americin, have been bropght to the islants. The lougest trip that can be mede in them is two miles, on a narrow roud out of Thorahuvi What Eotudas are to Ventice, rowhont are to The Farrues

WHEY DAY IS WASH DAY THAT THE HEHING SHAPS COMH IN
Women bent over tubn gerubbinge not clothes, but the firm, white flesh of freshly caught codfish, are a commoni haght on Faeroe wharves Spalis, Ituly, and Argentin are the principal markets for the catch.

A CDD FIHHPRMAN TNNTS A HAT,THUT
Occasionally the man who thrown his hoote nat line ovetboard ior It 5 - to 25 -pound cod fralle up fristead a lindibut thit may welgh as

 theit flocks for i "meney crop."

In the center of the room stands a low stone forge on which burns peat or, rarely, brown coal, and ahove the fire langs a wooden chimmey, which carties sotne but not all, the smoke to the outside air. Con= verted smoke rooms with modern improvements foast a stove where once the open fire gleamed, and a slyylight glass window where once an aperture in the roof, uncovered in good weather, sufficed to adthit light.

A visitor's streaming eyes give him evidence enough why the old conmumal living toom is called a "smolec room" Arouthd the hearthstone-entirely around
it, in fact - sit the family and neighbors on benclues. When for days at a time storms blot from sight the other islands, the ocean, the neighhar's house, and even the rock wall a few feet from the door, then the family circle draws still closer to the peat fire within the shatdering house.

Women knit homespun wool, and all sing the sagas of Facrue history that have been mansmitted word by word, line for line, from generation to generation, down the centuries, The favorite Faeroe saga has more than a hundred verses, and he is a poor islander indeed who canmot recite all of it.

While the school. master has his "stove roon'" and is the only man of Videri with a glass room, nearly all the farmhouses on Stromo have glass rootns, and in Thorshavn itself the cottmumal stove room has heen left out in the new, graceless contcrete houses.
A glass room is an appethlage of the smoke or stove room, having glass wint dows. Usmally it is a parlor and, like parlors of ant carliet day, can be utsed only on state occasions-for a funcral, for a marriage, or the reception of a special guest. Gernerally the unnsel parlor contains the family's only furniture, such as a table, a few chairs, a vase with paper flowers, and religious pictures on the wall.

## "HIGH" MEAT IRIFFRHED

Frequently the glase room was opened for me, but I preferred the fanily living room, with its warm stove, to these par-
lors, which gave forth the cold; musty odor of th cellar closed for many yeats.

The stove room serves, of course, as the dining roonl, and often I joined the islanders at their meals and ate their food. Sheep, fish, and whale are staples with them. The first two are common enough to most peoples Still, the method of preparing the food for the table in The Fatroes searedy recomtaends it to the fastidions, and my experictice among the Eskimos in Alaskis and tworthem Carada stood me in good stend when I was linvited to share a Facroe sheep.

Like most primitive northern peoples, the islanders prefer "high" meat, and to Eatisfy this desire thicy hang at skinned sticep in an open shed for about a year before eating it. The carcass scquires a crust like Camembert cheese. This is pared off, cach man using the knife

SCNLDS, VHKNWES, AND MISAONARHES HNTHEED HERE
Kirkebu's farmhonse, that was built to shelter in bishop goo years ago, receives visitors through its old Norse doorway, betilt by contempararics of Leif Ericssolt More accustomed to cirving dragonz that crosses, the artisans scuptured sen beasts instead of religiout emblems to guard the bithop's doorstep (see, also, paiges 62t-623).
stantly. The hiphly toned ment beneath the crust the matives eat raw.

Similarly, whale blubber must season for a month or more before the family mules high feast. Other seafond, however, receives different treatment. Newly catught fish are cleaned and dried and dried and dried-until they become-so hard that one's teeth can make no impression. But with a stout hammer the islander will powder hif durable coulfish on a stone and eat its dust, so to speak.

No one, they say, gocs to Mygemaes, the westernmost igland of The Fatroes, unless the trip is neecssary, for it has the
most violent surf. But the island is one of the nicsting places of the sule, or gannet; so I found to necessary to go. In eight hours from Thorshinva, Bech and I reached in miniature fjord on the sowth side of Myggentaes and I laped ashote. After he had anchored the Tush we climbed up the cliff with the cameras.

Now, Myggenacs consists of a main island, supporting about 125 inhahitants. who raise sheep and catch fish. Cursed it is liy winds and waves, for the storms thant leave Newfoundland and Greenland gather all their forces and loose them here. The rest of The Faeroes and Earope get

HROUD OF H15 ROCKY ISLAND ARD ANCIFNT IANGUACH
Higler whenes and an easter life of the continent catmot lure the Faertbe furmer from hin sod-ropfed house, his thin soil that will grow no grain save barley, and lis flock of sheep that suffers as much is he in the enles that seray the black rock and paitures with the sult spume of a ragin sein. When he cammot find a shecp, be lonowe what the hoppened: the wind las blown it over a cliff.

Fassage to and from the lighthouse islet and mainland lias been made possible by a cable bridge over the crevice 150 feet above normal water level The mighty power of the cliff-climbing waves that pound Myggenaes if suggested in the fact that the railings of this bridge lave been battered out of shape by rocks pitched against them by the crashing seas in winter storms!

We crossed the tortured bridge and picked our way along the path to the lighthouse. It led along the face of the clifif, where a misstep would send one into the boiling, writhing waters below. Occastomally a railing, but more often a rope, afforded safety on the path, and at last we renched the lighthouse.

It was operited by is Dane, who lived with his family in at house sheltered behind the lighthouse rock. The leeper told me of the awneme storms of winter, when a screaming. whistling black-
thie storms later: Myggenaes gets them first and worst.
At the very western end of the istand is a holm, or flet, separated from the main block by a crevice 75 fect wide, At the outer point of the detached piece stands the westernmost lighthouse of The Fraeroes. Its betcon blazes ont 413 feet nbove the sea. At the foot of the lightlouse cliff, their fourdations melting year by year in the tossing waters, are two pinnacles of tock on which in summer the gannets nest.
ness descends on the istand and the sea lifts up higher, higher, and higher on their rock; when the suffocating blast of stinging salt spray that no living crenture can stand against rages mercilessly.

But more telling even than his descriptions was the kerosene lamp which hangs from the ceiling of his living room. It has it lirge globe with a hole on either side, as if a shot had passed throtgh. During one winter storm, he said, a wave that rose up the cliff dashed over the precipice a pebble, which broke his window, passed
through his lamp, and struck iggainst the wall! He showel me the water-worm stone, which he retains as a keepsike.

TUE FATHOFS ARE DIS gunving IE THES\&A
Myggennes and the other iflands are of stout basalt, but the power of the waves conatantly wears them away. The attack of the sca, coming chieffy from the west, has split off the rock mirere on that stide; so The Facroes' highest clifts face the advanice of the waves, and here datily is enncted one of the most violent dramtas of Naturethe ceaseless, relentless assatult of the lireakers on the braced shoulders of rock Unequal though the battle may seemin. The Factoes are ditsolving in the Atlantic surf like sugar in tein. 1 was shown at rock needte which would scarcely give foothold to a motntain goat: it was all that remained of an island that had supported, within the history of the istanders, fi thousand sheep.

On one rare, calm morning we rode out beyond Myggenaes lighthouse to the pinnacles where the gannets nest. Up the rock climbed a skillod islatuder carrying a rope. which fie fastened aloft, permitting us to seratmble after him with comparative case.

The first mut up has such a dangerous tusk that I askef, since I knew they climbed it each year for birds. why they did not fasten a permanent cable to the rock. They replied that more than once they had fastened such a calle but the waves in winter always wathed it away. Once they
fastened an iron chain to the pirmucle, but that, tro, was carried off. Each nesting season these gannet eyries are covered with guano and, although the breeding places stand I 50 feet above the sea, waves wash the rochs clean every winter.

AT THE MERCY OF A CADRICIOUS FAFROE WINDSTOHM
Toward the end of the fifth day on Myggemaes the sky begen to datken, so Bech and I put out in a hurry to beat the storm to Thorshavn. We hiad no desire to fenain cooped up on Mygernacs

the tife, 40 hours after leaving Myggemocs. Never did fresh water taste so sweet nor bed feel more comfortable.

Although our experimec was not different from the risks the adventurous nutives rum frequently. I hope that I shall never have to make such a jourtuey rgatn.

## Acats OF TISII

While the farmer-fishermen of the morth islands like Myggenaes and Videro are self-supporting, living on the fish of the sea and the sheep on their barrents, almost independent of what the world has to sell or wishes to bry. different conditions obtain in the southern and more popalous islands, where extensive fisheries have long been operated.

So I went to Sydero to observe the landing, cleaning, and curing of the famotrs Faeroe klipfith or dried cond, which finds a market in Spain. Italy, and elsewhere.

A decline in this major industry has been cectasioned by many factors, The modern equipment used by steam trawlers elgewhere, newer and quicker methods of paching used in Newfoundland and Nor-
way, and a reduced world demand necessitated the recent extensive program of aid by the Danish Goverament. Figures show a tragic loss of trade; but to me, th newoomer, Sydero appeared to have nll the fish any isfland contld possibly wish.

The rock walls of the inlet redoubled the sound of our motor as we chugged into the port of Trangiswagy. Because it was a bright day, the rocky shore wis white with the codfish which are Sydero's chief stock fin trade. We nust land, but where, without stepping on a codfish spread out to dry? Actes of thish lay everywhere, suaking up the fitful Fueroe sunstime. Fish followed the shore line as if they had been cast up by the sea. They covered a slope like slates on a roof, thotsands of oval slabs of white fish meata. thirsty sight!

In order to see the industry from beginning to end. I went out on the banks in a fishumg schooner. A line, two hooks, and some fish of bird intestines for hait are all the gear a mative needs. When the boat has been anchored, over go the lines and in come the fish. For the novice, there is

SHA GUHT, LIEA $A N$ APAHTMENT कHII A VIHW

who an ute his lega ruthes shoreward to pile the fish in stacks under canvas. No one is exempt, ncontdity to the ctstom of the country, from rescuing the codfish from a rainstorm, and only once, in order to make films of the people romings. did I fail to Join the codtish stackeurs; otherwise I should have been looked down upon-

Sometimes the fish are distributed and stacked seven times in a single day!

If found the islanders of the south quite different from those of the north. Ont Videró and Gatero live the true sotis hond datghers of the Viking settlers, who
came about 800 A. D. They have blue eyes and flaxen hair. They are sflent, Etim, determined.

But in the south, probably due to an influx of foreign blood-historical records are fuggy-they often liave dark hair and eycs and are more nearly of the Latin temperament, being thare excitable, more inpetwous, and more hospitable to strangers than their northern brothers and sisters.

Despite these mirked differences, a sitigle lathprage serves all the inhabitants, and the native costume is used throughout the archipelago witheut impontant vatiation. Fteroese is such an old Scandinavian

SAYING AN GRPHAS OF THI STORM
Bhid weather in The Fueroes usully comes in the form of eain, so that an mumbilly severa stmesturm sureads havoc among the flocks of sheep. The zuthor wal one of a party that wemt out after a heavy snowfill to restue sherp. Deep fil the drifte thirs youthg lamb was found
tongue that few Dates, Norwegians or Swedes can understand it without trailing ; yet ifom the sagas preserved in it the Danich people have recovered songs and tales lost to them many generationis aro.

On our way to Sydero we pussed Lifle Dimontand Store Dimon, one of which was the seene of al later expedition. They rise like pyramids from the sed, greater and grander and rougher than Cheops's awn tomb.

No one, so far as I can learn, has ever lanted on Lille Dimon, because its cliffs tise sharply on all sides: but on Store Dimon lives one family which did have a calf and still has a cow and some sheep to grace on si smoll cliff-girt platean. At a certain period of the year Store Dimon's population is increased by four or five young men from neightoring iskands, who go birdittg tund egping in the wast rookcries on the bluffs facing suyth and west.

Four times we went to Store Dimon and failed to effect a landling. The fittin time the sea was calm enough and the tide was right. Bech anchored the Twesk and followed me to share. The wry to the lone farmhonse led 600 feet up the face of the cliff, where holes had been cut in the rock to provide a foothold (page 626).

The sole hinnseholder on the fsland, a tacitumn man, guided us up. At perilous places he would say: "So-and-so fell lure some years ago and was killed," Or, "Be ctirefill here: the priest slipped and wns dashed to death at this point." No ane ever got hurt, no one ever got of with a luroken leg; one either got killed or didn't get killed.

## CABLES HikACE WIND WALLS

Despite hits dispiriting death list, which reached seven or eight, we gained the top of the cliff safely antd walked to the farmhotise over agatist a hill. It was a large building surtounded by stone walls, which were higher and stronger on the cast and west sides. These main wind walls, constructed of cetnented stone, were six feet thick and were brneed intertially by heavy wire eables, which stretched from the top of each wall. plest the front of the house. to an anchorage at the base of the opposite wall (see page 631).

Cable-bracing on so firm at barricade surprised me iso 1 asked the owther if it were necessary. Even with the support of the cables, he told me, the wind pouring
from the bill twice broke down these walls ant nearly wreched the dwelling.

The sad story of the fanily living in this lonely farmhouse well illustrates the hardships and perils that the inhabitants endure. And yet they love their islands and will not leave them for an casier life in Dentark. Furthernore, each islander thinks his own island and its precipices more beautiful and marvelous than any other in The Faerves.

The household which we jotned consisted of in boy four years old, his widowed mother, a male relative (our gutde) who had taken charge of the farm, and five young birdeatchers, who had come over frum Strom for the seavon. The fittle child's father harl been killedl by a rock that fell on him while he was catching birds on the face of the cliff; hits grandfather had been killed by falling finto the sen white engaged in the same ofcupation, and his great-grandfather hat met sudden death from an avalanche of rocks.

Birdeatching on Stare Dituon's cliffs is consilered more haratdots than going to sen, and the young men who porsue the quest are mourned by their families as lost before they leave hotze.

The widow of Store Dimon had not been off the island for three yars hecanse whe would nut risk the dangers arid difficultues of the trip down the cliff.

## 3UA THIDS सEST IN CLITF APAMTMENTS

On all the istants birds mest on the south and west clifis, where they can get the ntaximam warnth from sunshine. Store Dimon has especially large colonies, which, each year about April, move into compartments on the predipice, ass New Yorkers move into slys craper apartments; On the very top, where there is sonie soil, the sea prarrots, or puffins, settle down. while the lomsies, of guillemots, also of the auk family, congregate in thousands ort the rock balconies overhanging the sea.

First we photographed the bfrock-andwhite sen prarrots. Often we found them, yellow hook-billed, scrappy little detenters of their properties, in the grass at the entrances to their nests. They burrow sometines a yard deep in the soil to build warm, protected nests for their young. There they hatch their babies, one at a time, but rapidly, and thus there may be eight or ten in the nest at once.

TWHNTHTH-CENTMRY YTRTNG HOMTS LINE UP HOR A RNEE

#### Abstract

Narrow-waistel, poated and uncurvid in stem and gtern, Farroe rowing bats to-day show Wheir direct decent from the Viking radets it whith Nopmenent a thousand yeat ato swept down of Enelant and northwet France and even salled to America, To surh biats The Fancer thunders dathod on Sunday, six wetcs ago abandonint church services, when sereaming sirctis annotniced the nppinach of a wholl of grim/ whales. Even the minister jomed lin the wholenale 

The male is the chief, although not the sole, foraget for the minnows pin which the fandily foeds. If be shoutd be curght or killed, another male bird will take his place at the nest; if the mother bird is killed, another hen will come; if both disappear, a foster parent. male or female will take charge of the little ones and feed them until they con care for themselves

How different from the lonmies and gulls in the apartments below! If a fuzzy young gutl's parents are killei, the other binds on the rock balcony not only fail to feed lim, lut will puah him over the eflge to death in the waters humitreds of fect below.

Sea parrots are stared in hoop nets on long poles by men who station themselves in the rocks on the sides of the cliffs. Such a position lofithes them close to the birds, flying around the isfard in dense flocks, as they stout for schools of tish. One swoop with the net and the birdcatcher has a hirdi; never more than one to a swoop. But an expert will take a thousand lirds in at diy. If a sea parrot
has in fish in his beak, the catcher will talways release the bird, bectuse he knows that it flies to feed its youmg.

## 

Catchiny lomvies alone the rock galleries requires an different technique and is much more dangerous. The catcher takes his pole net. fashions a swinging seat at the end of a stont, thick rope, and bepproaches the cliff edge. Then he walks backward over a brink 600 feet above the set (hee illustration, page 639). Fout of five strong men let him down gently.

Just as he reaches the ontermost point, he must give a gusil with his feet to sfat hifmself swinging, becanse the bird galteries have been undercut along the precipice face and can be reached only with a swinging motion. Once when I went down 1 failed to push off properly, so the men on the rope had to pull me up agnin until 1 could reach the rock with my feet. Once swinging one can increase or decrease the are at will.
Another difficulty is found in the twist-

FAUBOR TONHS RONM THOKGHAYN'S STHRPTS, MUNCIING GRASS TLETS
figg of the tope, which brings one's back instead of one's feet against the rocks. but by kicking and churning his legs in the air a trained birdeatcher can keep his face to the cliff.

Once he has reached the proper level, the birdeatcher makes a long swing, tands on the rock lalony with a flying leap, and hangs on like grim death. He finds limself in a colony of parent birds, fledglings. and eggs, which lie exposed on the bare rock. Moving his net in front of him and hulf concealed along the frece of the ledge, lie works toward the chattering throng. always carrying his rope. Suddenly he elerates his pole and the frightened birds fly into his net.

The eatcher, tike a duck hunter, hathgs his birds at his frelt mutil he con throw at tumbler of them to an assistant waiting in a boat below.

But he must be careful not to hit the assistant or the boat. Because of the great helght, egus falling off the cliffs lave been known to go through the bottoms of rowboats standing by at the base ( p .635 ).

Birding is no dde sport for the islandets, but a serions business, worth the hazards, for the flesh of the catches provides food for many mouths for many months and the eggs also are eaten.

In order that I might get frictures, we prepared two ropes, The birdeateler went over in one, while I was let down at the end of the other. He went at lis worls among the rookefies as I turned the crank of a small camera and concentrated on my task in the vain endeavor to forget the white surf rushing wildly against the rocks humdreds of feet below.

## 

As in matter of fact, the task of filming the bird life of The Faeroes braught me into no actual danget except once when I touk a position on an isolated pinnacle of rock in order to "shoot," photographically speaking a birdeatcher against the sky as he came over the lip of the clift. Weathering had rotted the rock and, in going over, the native boy distodged a loose mats directly over mic. By good fortme, only tiny picces hit me and the camern.

Shortly before we left Store Ditmon an incitent occurred which, with the cooperation of the farmer, I photograptiod at the risk of shattering the nerves of his calf. He had sold the benst to a man on one of the neighboring ialand=, and the new owner had come in a boat to get lief.

The master of Store Dimon fastened a large belt around the calf and, with the
assistance of everyone in sight, ensed her over the clift into mid-air. I photographed the call's departure. but I wanted also to get her arrfual down below; so I persuaded the farmer to leave her suspended in air for an hour and a half, white I picked my way down the steep path with my equipment. Then I photographied the culf landing at the base of the precipice

Every kind of goods that goes on or comes off Store Dimon rides on the 6oofinot improvised freight elevitur used to remove the calf (see page 648).

## A TEHTHHONE CALT FOR WTMLFB

Leating a telephoue call for whales wns, 1 suppose, the most unnsul experience of my two summers on The Factoes. After many fritse alarms, we grot it call that sent us racing around to the north shore of Viago, where a hert of more than a thousand grind whales (also kniown as cminy or pilot whales, or blachfish, a species of dolphin) fond been sighted. We saw the whales, but I failed to see a native whale hunt brought to the gory success that makes it such an astounding combit between men and beasts.

Whaling plays such an important part in the island life that I was enger to see it all-modern commerchal whale huntine in a steam whaler carrying a harpoon gun, and also the primitive Facroe lumt. The former was more casily arranyed.

For some years the Norwegiams have mhintained on Stromo the sole Facroc conmercial whating station, althongli the Danish program of aid calls for the estabdislment of another, to be operated by Danes and isfladers. So I went whale hunting in the Norwegian ships. Just as the ceptain was about to give iip and go back, the lookout sighted a big bowhead (Greenland right) whale.

My camern and I were at once lastived to the side of the bridge, where the high position gave me a view of the happoon gum, mounted in the how, and whatever the gun was pointed at. There I swunt. crumking ats the grmer shot and mifsed. that again and missed. shot again and hit the whale in the thil. The wommed creature dashed off, pulling the boat at considerable speed until the rope snappod.

Sonn we sighted the whale blowing again, and this time the harpooner made a clean hit. Out monster broke three lines that dry. Although we had reason to be-

Iieve the lhst harpoon killed the whale, at storm blowing up compelled the sailors to abandon their quarry and return to port.

Whales of varions species are taken off The Facroes. They are used mostly as food by the ishaders, becanse the Danish Government requires the Norwegian whaling station to sell to the natives at a very low charge all the whale meat they need. Any surplas the Norwegians reduce for the oil. A captured whate's usual ultimate destination, therefore, is half-and-huilf, so to speak-pat for the diminer table and part for the tannify tuls is soap.

Catching the grind whale is anothe story. It is no leviathan, like the bowhead whale, and seldon attains a greater length than as feet. Still, it is fair gathe for the islanders, who are forever watching the sea for a fleet of fins cutting the water. for these manmals travel in pueks.

Appearance of a school off The Faeroes sends the islanders into a irenzy of excitement. A rush of volunteer village firemen to fight a local blaze compares mildly with the madness that breaks loose when whales swim by. As soon ats a pack is sighted, all the men of the nearest comminity dash to thrir boats. They put out to sea, sutround the whales, atul herd them close to share by tossing rocks in front of those that try to escape.

Menitime, if a telephone of the interisland system is near, a peneral alarm goes out over the lines to every cummunity whose oarsmen conild be expected to reach the scene of action. If no telephone is tavaitable, the intabitants fall back on the ancient device of a smoke signal.

We thad begged to be called, night or day, rain or shine, and in answer to the most hopeful whale-hunt telephone call Bech and I sped north in the Tuell: As we turned a cape on Vango, a dozen Viking boats (see page 644) apperred, thssinf on the waves, in a great semicircle. One carried a white shitt on an improvised mast, a sign that its men had discovered the pack and were leading the lumt.

## HARIOON, LANCE AND ENIII DESTROY THI DOESNEM WHALHE

Within the are of boats hurvereds of gitistening-wet, sharp-pointed fits flashed and gleamed and slithered along the sen.

Forty tons is the estimmied wectht of the rock tlirewn up by a tretramdous wave to a ledge too feet above 耳ea lovel.

THE HHKH. ${ }^{4+}$ GOts OUT FOR WHALES
With bor harpoun gem prital for the kill, the stenm whmer crulecs atound The Facrees in
 price all the whute meat they demmint for food; the surpliti my be reduced to cill for export

A CALI HDESON THE STOEE DIMON FYEVATOLE:

The whales seemed to be playing like a yardful of school children at recess time. They were not aware of any danger and, indeed, the islanders wore little more than following the pack, careful not to alarm the sea creatures until retnforcement boats could arrive. Bechand I stayed well away, fearful lest the naise of the engine exhumst frighten the pack. Tense excitement gripped us, but our hopes were dashed when a storm eame swiftly down and all the hunters abandoned the humt to run for safe harbors.

If the whale hunt had gone on to a sucecseful kill, the first ring of boats would have herded the pack into the mouth of an inlet, Wher a second litue of boats hut been rowed into position back of the forward circle, the attacking islanders would have moved in closer, forcing the whates up the passage Then, at a sigmal, harpoont, lance, and knife would have begur theit gory work. Kill, kill, kill! The tuen strike and slast, yell and row wiflly, in their haste to destroy the cornered preck.

Some of the mamnals in their teror batter their lieads against the rock clifis

Some rush upon the beach, there to receive the coup de grace from men wading in blood and water up to their shothlers. Whales that make a dash for sea are set tupon by the secoud line of attack. The bunt is all the more stimulating becase it is not apt to occur frequently these days.

The Danish Government pays a special commissioner to stupervise the distritution of the meat after a hunt has been completed. When the rights of the men who actually killed the whales are sutisfied, the village that sighted the park receives at spectal quota. white the rembining meat is divided equally among the other communities that sent boats to the hunt.
Two long summers I waited in vain for a grind whale humt. From what I have been told I know that, as it is conducted in The Facroes, it mithat be one of the most heroically primordial confficts now to be secn on carth-an secne out of in sagat an incident in some hoary enic of heroes of the sword sudderily feentuted in all its stirring. fearful ruthlessuess: So 1 am going back some summer and wait for that telephone call, "Whales sighted!"

## Could rou remember the curistmas of 1915 ?

AHere if an unusual little incident. And it in tum
It was after dinner. We were reminisiog. The host suddenly pulled out his watchi, glanoed at it and went to the telephonat. His wife set down her coffee cup and leaned claser to one of the guests.
"Did you Fex that lovely old Hamiltan of John"s?" the whispered. "Don't teill him,
pleas, but wetre going to give him a netu Hamilton this Chrestmas."
"A great ideat How Jong hia Jotin hid that watch?
"His father gave it to him in igts. He"ll always femember that datte cratily. Yous mehow do-when it comen to thinge lite that"

Todiy's Hamiltont ate more modern, of crar-s, andid more gricious thain the Hamiltons of ysitcrycir. Styles change, and so do peopte's tastos. But Himiltons have the kane uncanny noturncy they have always had.
If sormone in yeur family hasn't a fine watch, we itvitt you-we urge you-to give him (or her) onve of theere new Hemiltoms, so that Father or Son or Duaghter will have an aicturate, beautiful wath to treatrute for years abend -a watch so lowely, to pricions, they will aluusy famamber Chritmus, 199 a

## When men develop NERVES WATCH YOUR HUSBAND

When men develop "neryes"-complain of exhaustion, day after day ... when bedoutbids bridge or the theatre - wives know that overwork is beginning to tell. It's time to act.

If your husband is giving too much of himself physically and mentally to his
 business . . . consider the virtues of a Winter cruise via Red Star or white Star Lines . . . to the Mediterranean or Around the World. For systematic rest . . . complete change of scene to erase wrinkles from a man's brow and chase worries from his mind . . . nothing can equal an ocean voyage.

It's really wonderful how quickly tired bodies and minds respond to this stimulating treatment! Ocean breezes keen and fresh-sunshine chockful of health! A sea trip is the sovereign cure! Take your husband and go. Let us tell you about our delightful cruises, described in the uniusual booklet, "Watch Your Husband."

## WORLD CRUISE

of the Belgenland, giant flagship of the Red Star Line, most famous globecircling liner. From New York, Dec. 15, 133 -day litinerary, the result of six years' experience in round-the-world cruises. Red Star Line in cooperation with American Express Company. $\$ 1750$ (up), with shore program.

## MEDITERRANEAN

- Four de luxe 46 -day Cruises by White Star liners Britannic (new) and Adriatic. Jan. 8 and 17, Feb. 26. Mar. 7. Algiers, Italy, Greece, Holy Land, Egypt and other points of principal tourist interest. \$695-\$750 (up) First Class - \$420 Tourist Third Cabin, both including shore program.

Address your inquiry for descriptive literature and for the booklet, "Watch Your Husband," to Desk A, I. M. M. Company, No. I Broadway, New York City.

## WHITE STAR LINE • RED STAR LINE

# It's Amazing what You Get

## CA $\mathcal{A C E W}$ <br> Artistic Movement

ONE evening a group was discussing the new interest in art. Magnificent art museams have gone up and millions have visited them. But these are a relatively small number and there are other millions who can't go because of the time and money needed. These museums are in the larger cities, out of reach of those in the townis.

It was the opinion that, in spite of museums, we do not have the opportunity for the expression of our artistic desires that we deserve. To see the best involves an expensive trip throughout the United States and Europe, for the majority of the world's art treasures still remain abroad.

Then one of the men said, "Let us form an association and give these millions of art-hungry people art where they want it-in their homes, not hundreds of miles away; in Europe or in some private collection. Let this association publish selected works of art from America and Europe, help people to choose the best, and distribute them at the lowest possible cost." Everyone thought the idea good-the result was the

## Six Months Old Today!

Tomorrou he is golng to keep an appointment with his doctor made the day the baby was born.

More than half of oll deaths from diphtherid occur among childten betwect the ages of six months and fite years. A striking contrast is presented by comparison of the deathrates from diphtherts in two groups of representative American cities. For the past three years the first group hass carred on an intensive campign to immunize all childrenagainstdiphtheria and hat decreased its deathrate $33 \%$. During the sime period the gecond group of cities has been less adgrefo sive and has had an increase of $9 \%$.

Protection can be given your baby whether or not you live in a city or a. part of the country which has ar dangerous diphtheria deathrate. Take him to your doctor and you will be spured one anxicty from which pat gencrations were never free.

Metropolitan Life Insurance Company will gladly mail free, its booklet, "Diphtheria is Preventable". Address Booklet Department II30-N.

YOUNG mothers of this generation little realise the heatnches and anxicties their grandmothers suffered in rearimg their children. Forty yours ago diphithertia killed six times is many babies as it does todlay. People were helpless when diphetherta epidemics raged Then there was neither anti-toxin to help fight the divelse, nor toximantitoxin (or toxoid) to prevent it.

Nowndays, the disease has almost dis: appeared in communities where people have organized campaigns to educate and persuade every mother to have her baby inoculated amainst diphtheri at the ige of six months. Nevertheless, throughout the length and breadth of the country, about 8,000 childien died last year from this one cause. They had not been protected as they might have been.

Immunization is a very simple matter

## The continent that became a neighborhood

An Advertisment of the Amorican Telephone and Trelegraph Company

Thmouna slim wires etched panntut the sky . . . through cables lind in the earth under cities and fields . . . millionn of Americans, miles'or days' Joumeys apart, speak to each other as readily as though they stood fuce to face.
Over hat telephone, a housewift in a Wisconthin town imures abour a dresa pattern from a friend who lives nearbe Ovet his telephone, a business man in Phatadelphia talks to another in Denver. Over her telephone, a mother in Kameac acks her som at college fifty miles away if he will come home for the weck-end. Over his relephone, it cabinet member in Wushington give instructions to an wssistant in Seattle. Regurdless of distance and the complexity of modern living, they talk directly and immediately with any one, anywhere, ut miny time they choose.
The function of the Bell Telephone

Syatem is the vital one of making it porsible to maintain socinl und business contacts in cities that confain many times more people thum this nation once bousted . . . in a neighborhood which the Census reperts to hold 127 million people. Mear after year from its bepinning, the Bell System han increased its facilitien, its persomnel uthd its uscfulness. Looking ahead and plannitrg for the future, it has formarded the growth of thit nation by meeting its commumication necofe fully and economically. Today it ovetcomes the hindrances of distantre and time . . . and unifies a civilization geared to the halit of instantanteus communicationt.
Because it serves all who call en it, by enriching their lives und helping to make their enterprises more successful, the telephone plays an tncreasingly useful part in the every-dny activitios of the Americin people.

Life for a certain city doctor kept growing more and more strenuous. He was on the staff of a large hospital. He had a rapidly increasing practice.

He had to muke time for his surgical operutions. He had littie time to study investment trends. But he could not afford to neglect hits personal investments. How could he attend to them quickly, safely and with full realization of opportunities?

A BUSINESS that has lived and flourished over 178 years must have much to recommend it.

But the appeal of the mutual plan of insuramee to the modern business man goes far beyond mere age.

The very essence of mutual insuranee is economy in operation, prevention of loss and a return to the policyholder of the unused part of his premium.

Mutual casualty companies charge no higher premiurn rates than orher insurance carriers for workmen's compensation, automobile of the other fornts of casualry insurance.

Yet the companies listed on this page are able to return millions of dollars in
dividends to their policyholders every year; to the individual policyholder a substantial part of his premium.

For any casualty risk mutual insurance offers sound protection -a definite saving.

An interesting booklet is available on request. Address Mutual Casualty Insurance, Room 2200, 180 North Michigan Avenue, Chicugo, Illinois.

# NATIONAL HOTEL of CUBA <br> HAVANA $\rightarrow$ CUBA 

Eater tar serraing of<br><br>The Patai भान New<br>will $1+$ taligh mimiter

When sun and amethyst seas are at their beat ... when chic Americans are leaving winter in the cold for the Paris of the tropies . . . the National Hotel has timed its opening. The Plaza and Savoy-Plaza of New York have set their duplicate in luxury on the Malecon...in the super-fashionable section of Havana.
Seventy-five feet of palmshaded altitude turns on cool Caribbean breezes. You dine on the smartest of terraces . . . or in a salon of eilver. splashed with color-mad flowers of the tropics . . . just to remind you that this is

Havana, not Monte Carlo or Cannes..., while Paris* minded chefs lean toward the exoticin cuisine. A brokerage office bringe Wall Street into the hotel . . . and you sleap or entertain expansively in roome of regal proportions. And when you're not gaming at the casino or playing crack golf on palm-edged courses... or swimming in the private pool . . . you'll be dancing on polished parquet . . . in gatherings notable by a sprinkling of diplomats. Obviously you should arrange to be in Havana this winter. Heservatione may be mude nt The Phuen and Savoy-Plaza, New York

## A SOUND INVESTMENT . . . OFFICES IN THE FIFTH AVENUE BUILDING

There are many reanons why so many succesful businesses have beon attructed to The Fifth Avenue Building. Primurily it is becanse it has proved, and is proving, a sound investment to maintain offices and display rooms here. Secondarily it enjoye one of the world's most famons addreases. . . . The Fifth Avenue Building is situated at the intersection of Broadway and Fifth Aveme, the very heart of the largest market history has known. Buyers from all parts of the world come here to inspect and to buy the products displayed within these wallf. . . . The directory of this most modern market contains names distinguihied in varied fields of business. Here bayere complete seasonal requirements in one trip in such lines as glats, pottery, men's woar, women's wear, laces, office equipment, cards and atationery, novelties, toys, and numerous other lines. . . . The building is extremely accessible. It is ten minutes to Pennsylvania Station by sulbway and thirteen to Grand Central. Busses and surface care pass the doors Elevated lines operate within two blocks' radius. The shopping and financial districts are at either hand. . . . A booth in the lobly supplies information concerning lines listed, places of ammement, and points of civic interest. An attractive restatant on the main floor serves excellent food. . . . Allow the to show you about the building during your next trip to New York.

## A new, safer way to eat Bran

DOCTORS are recommending Pettiohn's as the soffe way to eat bran. That's because this delicious hot cereal provides whole bran concealed in tender flavory flakes of whole wheat. Thus every tiny sharp brun edge is made soff by cooking. It's safe for nervous digestions . . . non-irfitating even to the tender digestive tract of a child. You'll say you never knew bran could be so gentle, so effective . . .so utterly delinious, Pettijohn'\# takes but 3 to 5 minutes to cook. It's made by The Quaker Oats Company, manufucturers of 49 difterent cereal products, with mills in 12 cities throughout the United States and Canadn. Try Pettijohn's tomorrow morning!

# Retail credits and motor cars 

MANY generntions Hgo，when banks begun to extend credit to producers of raw ma－ tertials and manufacturess of fith－ shed goode，the world experi－ dheed ath immentie increase in production and in wealth．

This generation is witnessime a corresponding extensinn of credit to the individual consumer， which has stimulated the sale of goods becatus it has chabled the average family to enjoy greater duwntages and ereater comforts to in extent never paralleled．

The principle of instalment purchasing has been utilied by mieny lines of industry，but in none has it played such an im－ portant role as in the motor car industry，where more than tor per cent of all cats are now sold to individuals on credit．

General Motors，back in 1929 ，recognized the importance of time pay． ments in retaill sales and
organized the General Motors Acceptunce Corporation as an independent banking institution to provide eredit on a sound ba－ the to General Motors dealers and to beyers of General Notors products．This institution fus enabled mure thim 5 million pet－ ple to enjoy their cars while pay－ inis for them out of income．

This one institution has grant－ ed more than two and one－half billion dollaps of credit，based upon the inhorent honesty and industry of the American peuple． The butk of this vast sum hies leen borrowed from al group of the world＇s most forward－looking bantcs．

Withoot this sound eredt structure and binking coopern－ tion，the amtamotive industry， with all thut it means to American life annl proper－ ity，could not have become the largest manufactuting industry in the world．

## Do you rinse just part of the soap out of your hair?

## Surprisingly increased efficiency In the

 Two New HeoversYour Hower dealer will be plad to show you thena two renarkoble now Hoower modely, of fering groatly incrnased diftetemoving ability end atlling at the some price an former madeli.

YOU know it is simply ruinous to your hair to leave soop in it when you wash it. It is even more ruinous to your rugs to leave dirt in them when you clean them.

The dirt left in them-when you clean them with a broom or with suction alone - is the most dangerous dirt of oll, the destructive grit which saws through the nop and wears out the rug.

There is just one way to get out this deep-packed grit. That is to clean your floor coverings with a Hoover, It dislodges the embedded dirt-beating it out by means of Positive Agitation. Only The Hoover has this beating principle. Because of it, The Hoover is able to remove more dirt per minute than any

## HOOVER

17 UEATS AS $1 T$ SWEEPS OA5 IT CLEANS
ON A CUSHION OF A1P
other cleaner, giving faster and more thorough cleaning. It consumes less human energy for its operation. And it gives new beauty to floor coverings, lifting and straightening the nop, restoring the rug colors and removing the ugly threads and lint that usually cling so tenaciously. In other words, it gives sclentific care to your floor coverings.

Ask your Hoover dealer for a freetrial or home demonstro. tion of The Hoover and its efficient dusting tools. Two Hoover models. Only $\$ 6.25$ down; balance monthly, Liberal allowance for your old cleaner.
